Java Security Scott Oaks, 2001-05-17 One of Java s most striking claims is that it provides a secure programming environment Yet despite endless discussion few people understand precisely what Java s claims mean and how it backs up those claims If you re a developer network administrator or anyone else who must understand or work with Java s security mechanisms Java Security is the in depth exploration you need Java Security 2nd Edition focuses on the basic platform features of Java that provide security the class loader the bytecode verifier and the security manager and recent additions to Java that enhance this security model digital signatures security providers and the access controller The book covers the security model of Java 2 Version 1.3 which is significantly different from that of Java 1.1 It has extensive coverage of the two new important security APIs JAAS Java Authentication and Authorization Service and JSSE Java Secure Sockets Extension

Java Security 2nd Edition will give you a clear understanding of the architecture of Java's security model and how to use that model in both programming and administration. The book is intended primarily for programmers who want to write secure Java applications. However, it is also an excellent resource for system and network administrators who are interested in Java security, particularly those who are interested in assessing the risk of using Java and need to understand how the security model works in order to assess whether or not Java meets their security needs.

Software Services for e-Business and e-Society Claude Godart, Norbert Gronau, Sushil Sharma, G r me Canals, 2009-09-29 I3E 2009 was held in Nancy, France during September 23-25, hosted by Nancy University and INRIA Grand Est at LORIA. The conference provided scientists and practitioners of academia, industry, and government with a forum where they presented their latest findings concerning application of e-business, e-services, and e-society and the underlying technology to support these applications. The 9th IFIP Conference on e-Business, e-Services, and e-Society, sponsored by IFIP WG 6.1 of Technical Committees TC6 in cooperation with TC11 and TC8, represents the continuation of previous events held in Zurich, Switzerland in 2001; Lisbon, Portugal in 2002; Sao Paulo, Brazil in 2003; Toulouse, France in 2004; Poznan, Poland in 2005; Turku, Finland in 2006; Wuhan, China in 2007; and Tokyo, Japan in 2008. The call for papers attracted papers from 31 countries from the venue continents. As a result, the I3E 2009 program offered 12 sessions of full paper presentations. The 31 selected papers cover a wide and important variety of issues in e-Business, e-services, and e-society, including security, trust, and privacy, ethical and societal issues, business organization, provision of services as software and software as services, and others. Extended versions of selected papers submitted to I3E 2009 will be published in the International Journal of e-Adoption and in AIS Transactions on Enterprise Systems. In addition, a 500 euro prize was awarded to the authors of the best paper selected by the Program Committee. We thank all authors who submitted their papers, the Program Committee members, and external reviewers for their excellent work.
