

## Final note on unsteady state material balance problems

- We have considered unsteady state material balance problems of one reactant into one product:
  - $A \rightarrow B$
- In reality, we may be feeding multiple reactants into the system and producing multiple products and by-products.
- What about other kinds of reaction types:
  - $2A \rightarrow B$
  - $A = B + C$
  - $A = B + C + D$

**Proceedings of the Third International Conference on Unsteady State Processes in Catalysis** Yurii Matros, Vadim Strots, 1999 *Unsteady State Processes in Catalysis* Yu S. Matros, 1990-12 In the last decades the investigation methods of unsteady state catalytic processes have been widely developed by the response technique methods From this research emerged the realization that under unsteady state conditions and especially under artificially created ones it is possible to increase the productivity or selectivity of a catalyst or a catalytical process as a whole The scientific literature in this field is mostly theoretical and aims at structuring and analysing mathematical models of unsteady state catalytical processes In this book the theoretical and applied aspects of an efficiency of artificially created unsteady conditions in catalysis are discussed It contains the lectures from researchers from all over the world that were held during the International Conference Unsteady State Processes in Catalysis 5 8 June 1990 Novosibirsk USSR Topics include The problems of dynamics of a catalyst surface Kinetic models of unsteady processes Dynamics of chemical reactors Artificially created unsteady processes in a catalytic reactor 5th Unsteady-state Processes in Catalysis Toshimitsu Suzuki, Tomohiko Tagawa, Takashi Aida, 2008

Matros, 1988-12-01 This book deals with catalytic processes under forced non steady state conditions It demonstrates both theoretically and practically that forced non steady state processes are highly efficient compared with steady state processes and illustrates this with a wealth of practical examples The first part of the book describes the theoretical and experimental basis of efficient processes mathematical models of non steady state processes in reactors influence of a non steady state catalyst surface problems of optimization the theory of a heat front in the fixed catalyst bed and methods to create efficient cyclic regimes The second part considers the following processes sulphur dioxide oxidation in sulphuric acid production cleaning of effluent gases from toxic impurities production of high potency heat ammonia and methanol synthesis etc The book will appeal to many readers chemical engineers especially in the field of mathematical modelling of reactors with a fixed catalyst bed personnel of chemical plants and machine manufacturing companies dealing with maintenance and installation of catalytic reactors specialists in detoxification of the effluents from organic admixtures and carbon monoxide students of technical colleges and universities Fourth International Conference on Unsteady State Processes in Catalysis (USPC-4) International Conference on Unsteady State Processes in Catalysis. 4, 2003, Montréal, 2004 **Fourth International Conference on Unsteady-State Processes in Catalysis (USPC-4)** Hristo Sapoundjiev, 2004 *Forth International Conference on Unsteady-state Processes in Catalysis (USPC-4)* Hristo Sapoundjiev, 2004 Proceedings of the
