

A black and white photograph of pianist Lang Lang. He has his eyes closed and his right hand is raised, palm facing forward, with fingers slightly spread. The background is a vibrant red with black ink splatters and brushstrokes, reminiscent of traditional Chinese ink wash painting. The text is overlaid on the left side of the image.

Universal Sec Lang Acqui:

Reading acquisition of chinese as a second/foreign language Linjun Zhang,Zaizhu Han,Yang Zhang,2023-07-12

Processing Across Languages Shelia Kennison,2018-02-28 The Research Topic aims to highlight research on the processing of words sentences and discourses across languages Articles representing processing in a wide variety of human languages will be featured Efforts will be made to have articles representing as many language families as possible The methodology used to investigate language processing is open Manuscripts may report studies involving monolinguals or individuals knowing more than one language Research addressing the extent to which all human languages are processed similarly are welcomed as are studies investigating the extent to which the different types of linguistic knowledge are stored differently in memory

Learning foreign languages: experiences of persons with disabilities and special educational needs and their teachers Ewa Domagala-Zysk,Jitka Sedláčková,Katarzyna Karpińska-Szaj,2025-09-22 In many parts of the world it is not a person s native language but a foreign one which is used for education work or entertainment This is true for many European countries whose inhabitants need to learn English as a foreign language if they want to participate in education or among diverse fields in the workforce In other parts of the world it might be Spanish Hindi Mandarin Chinese Arabic or other languages which will be serving a similar role This need for learning a second language is understood well in many educational programs including those for students with special educational needs However to date there is not much research of the experiences of persons with diverse additional needs as learners of foreign languages The most robust literature covers the field of additional language acquisition among Deaf and Hard of Hearing DHH people cf Domaga a Zy k Podlowska Moritz 2021 and others Goals methods and forms of teaching are fairly well described and DHH students needs have been documented extensively

The Grammar of Multilingualism Artemis Alexiadou,Terje Lohndal,2016-10-31 This volume investigates the nature of grammatical representations in speakers who master multiple languages Since the early days of modern formal approaches to grammar most work has been based on the language of monolingual humans Less work has been conducted based on data from speakers who possess more than one language Although important insights have been gained from a monolingual focus there is every reason to believe that bi and multilingual data can inform linguistic theory A lot of ongoing work demonstrates that this is indeed the case and the current volume contributes to this growing literature Thus the research topic addresses a number of questions relating to grammatical structures in multilingual speakers as well as the methodological issues that arise in the context of studying such speakers A better understanding of the grammatical sides of multilingualism is crucial for understanding the human language capacity and in turn for offering better advice to the public concerning issues of language choice for multilingual children and adults education and language deficits in multilingual individuals

Learning a non-native language in a naturalistic environment: Insights from behavioural and neuroimaging research Christos Pliatsikas,Vicky Chondrogianni,2015-09-02 It is largely accepted in the

relevant literature that successful learning of one or more non native languages is affected by a number of factors that are independent of the target language s per se these factors include the age of acquisition AoA of the target language s the type and amount of formal instruction the learners have received as well as the amount of language use that the learners demonstrate Recent experimental evidence suggests that one crucial factor for efficient native like performance in the non native language is the amount of naturalistic exposure or immersion that the learners receive to that language This can be broadly defined as the degree to which language learners use their non native language outside the classroom and for their day to day activities and usually presupposes that the learners live in an environment where their non native language is exclusively or mostly used Existing literature has suggested that linguistic immersion can be beneficial for lexical and semantic acquisition in a non native language as well as for non native morphological and syntactic processing More recent evidence has also suggested that naturalistic learning of a non native language can also have an impact on the patterns of brain activity underlying language processing as well as on the structure of brain regions that are involved expressed as changes in the grey matter structure This Research Topic brings together studies on the effects of learning and speaking a non native language in a naturalistic environment These include more efficient or native like processing in behavioural tasks tapping on language lexicon morphology syntax as well as changes in the brain structure and function as revealed by neuroimaging studies

adulthood relies on the same learning mechanisms as in childhood The critical evaluation of this controversy leads to the conclusion that traditional learning concepts need to be revised in more dynamic terms The dynamic approach proposed is applied in the investigation of the intra individual variation in adult L2 German **The Universal Cyclopaedia** ,1899
