**Inference Control in Statistical Databases** Josep Domingo-Ferrer, 2003-08-01 Inference control in statistical databases also known as statistical disclosure limitation or statistical confidentiality is about finding tradeoffs to the tension between the increasing societal need for accurate statistical data and the legal and ethical obligation to protect privacy of individuals and enterprises which are the source of data for producing statistics Techniques used by intruders to make inferences compromising privacy increasingly draw on data mining record linkage knowledge discovery and data analysis and thus statistical inference control becomes an integral part of computer science This coherent state of the art survey presents some of the most recent work in the field The papers presented together with an introduction are organized in topical sections on tabular data protection microdata protection and software and user case studies

**Loss Models** Stuart A. Klugman, Harry H. Panjer, Gordon E. Willmot, 2012-09-04 Praise for the Third Edition This book provides in depth coverage of modelling techniques used throughout many branches of actuarial science The exceptional high standard of this book has made it a pleasure to read Annals of Actuarial Science Newly

organized to focus exclusively on material tested in the Society of Actuaries Exam C and the Casualty Actuarial Society's Exam 4 Loss Models From Data to Decisions Fourth Edition continues to supply actuaries with a practical approach to the key concepts and techniques needed on the job. With updated material and extensive examples, the book successfully provides the essential methods for using available data to construct models for the frequency and severity of future adverse outcomes. The book continues to equip readers with the tools needed for the construction and analysis of mathematical models that describe the process by which funds flow into and out of an insurance system. Focusing on the loss process, the authors explore key quantitative techniques including random variables, basic distributional quantities, and the recursive method, and discuss techniques for classifying and creating distributions. Parametric, non-parametric, and Bayesian estimation methods are thoroughly covered, along with advice for choosing an appropriate model. New features of this Fourth Edition include expanded discussion of working with large data sets, now including more practical elements of constructing decrement tables; added coverage of methods for simulating several special situations; an updated presentation of Bayesian estimation, outlining conjugate prior distributions and the linear exponential family, as well as related computational issues. Throughout the book, numerous examples showcase the real-world applications of the presented concepts, with an emphasis on calculations and spreadsheet implementation. A wealth of new exercises, taken from previous Exam C 4 exams, allows readers to test their comprehension of the material, and a related FTP site features the book's data sets. Loss Models Fourth Edition is an indispensable resource for students and aspiring actuaries who are preparing to take the SOA and CAS examinations. The book is also a valuable reference for professional actuaries, actuarial students, and anyone who works with loss and risk models. STATISTICAL INFERENCE : THEORY OF ESTIMATION MANOJ KUMAR SRIVASTAVA, ABDUL HAMID KHAN, NAMITA SRIVASTAVA, 2014-04-03. This book is a sequel to a book *Statistical Inference: Testing of Hypotheses* published by PHI Learning. Intended for the postgraduate students of statistics, it introduces the problem of estimation in the light of foundations laid down by Sir R. A. Fisher (1922) and follows both classical and Bayesian approaches to solve these problems. The book starts with discussing the growing levels of data summarization to reach maximal summarization and connects it with sufficient and minimal sufficient statistics. The book gives a complete account of theorems and results on uniformly minimum variance unbiased estimators (UMVUE), including the famous Rao-Blackwell theorem to suggest an improved estimator based on a sufficient statistic and the Lehmann-Scheffé theorem to give an UMVUE. It discusses the Cramér-Rao and Bhattacharyya variance lower bounds for regular models by introducing Fisher's information and Chapman-Robbins and Kiefer variance lower bounds for Pitman models. Besides, the book introduces different methods of estimation, including the famous method of maximum likelihood, and discusses large sample properties such as consistency, consistent asymptotic normality (CAN), and best asymptotic normality (BAN) of different estimators. Separate chapters are devoted for finding the Pitman estimator among

equivariant estimators for location and scale models by exploiting symmetry structure present in the model and Bayes Empirical Bayes Hierarchical Bayes estimators in different statistical models Systematic exposition of the theory and results in different statistical situations and models is one of the several attractions of the presentation Each chapter is concluded with several solved examples in a number of statistical models augmented with exposition of theorems and results KEY FEATURES Provides clarifications for a number of steps in the proof of theorems and related results Includes numerous solved examples to improve analytical insight on the subject by illustrating the application of theorems and results Incorporates Chapter end exercises to review student s comprehension of the subject Discusses detailed theory on data summarization unbiased estimation with large sample properties Bayes and Minimax estimation separately in different chapters
