## The End Of This Orbit:

**Periodic Orbits, Stability and Resonances** G.E.O. Giacaglia,2012-12-06 The subjects of resonance and stability are closely related to the problem of evolution of the solar system It is a physically involving problem and the methods available to mathematics today seem unsatisfactory to produce pure non linear ways of attack The linearization process in both subjects is clearly of doubtful significance so that even if very restrictive numerical solutions are still the best and more valuable sources of informations It is quite possible that we know now very little more of the entire problem that was known to Poincare with the advantage that we can now compute much faster and with much more precision We feel that the papers collected in this Symposium have contributed a step forward to the comprehension of Resonance Periodic Orbits and Stability In a field like this it would be a surprise if one had gone a long way toward that comprehension during the short time of two weeks But we are sure that the joint efforts of all the scientists involved has produced and will produce a measurable acceleration in the process If this is true it will be a great satisfaction to us that this has happened in Brasil The Southern Hemisphere in America has now begun to participate actively in the Astro nomical Society and for this we are grateful to everyone who has helped

**Generating Families in the Restricted Three-Body Problem** Michel Henon,1997-11-27 The classical three body problem is of great importance for its applications to astronomy and space navigation and also as a simple model of a non integrable Hamiltonian dynamical system A central role is played by periodic orbits of which a large number have been computed numerically Here the author explains and organizes this material through a systematic study of generating families which are the limits of families of periodic orbits when the mass ratio of the two main bodies becomes vanishingly small The most critical part is the study of bifurcations Many cases are distinguished and studied separately and detailed recipies are given Their use is illustrated by determining generating families and comparing them with numerical computations for the Earth Moon and Sun Jupiter systems
