An Interim Report on NASA's Draft Space Technology Roadmaps National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Steering Committee for the NASA Technology Roadmap, 2011-11-18 For the National Aeronautics and Space Administration NASA to achieve many of its space science and exploration goals over the next several decades dramatic advances in space technology will be necessary NASA has developed a set of 14 draft roadmaps to guide the development of such technologies under the leadership of the NASA Office of the Chief Technologist OCT Each roadmap focuses on a particular technology area OCT requested that the National Research Council conduct a

study to review the draft roadmaps gather and assess relevant community input and make recommendations and suggest priorities to inform NASA's decisions as it finalizes its roadmaps. The success of OCT's technology development program is essential because technological breakthroughs have long been the foundation of NASA's successes from its earliest days to the Apollo program to a vast array of space science missions and the International Space Station. An Interim Report of NASA's Technology Roadmap identifies some gaps in the technologies included in the individual roadmaps. The report suggests that the effectiveness of the NASA space technology program can be enhanced by employing proven management practices and principles including increasing program stability, addressing facility issues, and supporting adequate flight tests of new technologies. This interim report provides several additional observations that will be expanded on in the final report to be released in 2012.

Space Systems Failures David M. Harland, Ralph Lorenz, 2007-09-14. The very first book on space systems failures written from an engineering perspective. Focuses on the causes of the failures and discusses how the engineering knowledge base has been enhanced by the lessons learned. Discusses non-fatal anomalies which do not affect the ultimate success of a mission but which are failures nevertheless. Describes engineering aspects of the spacecraft making this a valuable complementary reference work to conventional engineering texts.

Space Technology & Planetary Astronomy Joseph N. Tatarewicz, 1990. The book reminds us of an important lesson in the postwar era of big science: that government policy may lead initially to tremendous support for various fields of science and technology. Science: a triumph of historical analysis. Choice. This is an excellent record of the beginnings of the NASA planetary astronomy program in the years 1958-70. American Historical Review. The historical circumstances that led to this country's great leap into space were unique, but it is clear that there are many lessons to be learnt from this enthralling tale, and Tatarewicz tells the tale well.

Annals of Science When NASA went looking for expertise on the moon and planets following Sputnik they found that astronomers had long since turned their telescopes away from our planets and toward the stars Where were the scientists who could help the United States explore the solar system The answer as this important new study shows was that NASA had to create them This story of the precipitous rise and decline of planetary astronomy is an important case study of science in an age of state managed research and development It demonstrates that the lines between science technology politics and society are anything but fixed and impermeable
