Lau, 2015-10-12 This book constitutes the refereed proceedings of the 14th International Conference on Web Based Learning ICWL 2015 held in Guangzhou China in November 2015. Coming to Terms Markus Asper, 2023-12-31 Terminologies present various challenges to their inventors and to their users ranging from epistemic adequacy over linguistic concerns to matters of strategy and group construction. With respect to historical terminologies, however, research has been dominated by linguistic approaches. Breaking new ground, *Coming to Terms* collects eleven articles that combine an interest in the history of knowledge, mostly ancient Greek, with research on scientific terminologies. They all share an interest in terminological practices that is questions such as how and when to coin a term and then what to do with it. Among the fields discussed are astronomy, the Roman surveyors, Aristotelian science, Renaissance and modern biology, contemporary medicine, ancient Chinese philosophy, 20th century physics, and colonial linguistics. *Confronting ancient with modern terminologies* the collection intends to test integrative interpretive approaches. Thus the collection documents how rich ancient and modern terminologies are and shows that they are beyond lexicography, worth being studied per se.

A Generative Theory of Relevance Victor Lavrenko, 2008-11-14 A modern information retrieval system must have the capability to find, organize, and present very different manifestations of information such as text, pictures, videos, or database records, any of which may be of relevance to the user. However, the concept of relevance, while seemingly intuitive, is actually hard to define, and it's even harder to model in a formal way. Lavrenko does not attempt to bring forth a new definition of relevance, nor provide arguments as to why any particular definition might be theoretically superior or more complete. Instead, he takes a widely accepted, albeit somewhat conservative, definition, makes several assumptions, and from them develops a new probabilistic model that explicitly captures that notion of relevance. With this book, he makes two major contributions to the field of information retrieval: first, a new way to look at topical relevance, complementing the two dominant models, i.e., the classical probabilistic model and the language modeling approach, and which explicitly combines documents, queries, and relevance in a single formalism; second, a new method for modeling exchangeable sequences of discrete random variables, which does not make any structural assumptions about the data and which can also handle rare events. Thus, his book is of major interest to researchers and graduate students in information retrieval who specialize in relevance modeling, ranking algorithms, and language modeling.
