*A Cognitive Approach to Situation Awareness* Simon Banbury, Sébastien Tremblay, 2004 The importance of situation awareness SA in assessing and predicting operator competence in complex environments has become increasingly apparent in recent years It has been widely established that SA is a contributing factor to many commercial and military accidents and incidents Yet determining exactly what constitutes SA is a very difficult task given the complexity of the construct itself and the many different processes involved with its acquisition and maintenance This volume brings together recent developments from researchers and practitioners from around the world who are studying and applying SA from a cognitive perspective The 41 contributors represent many different theoretical perspectives research approaches and domains of application Each chapter has a primary emphasis around one of three main topics theory measurement and application and examines the considerable inter linkage between them To bring further coherence to the book all of the contributors received draft manuscripts of those chapters most relevant to their own Designed to be completely international and interdisciplinary the authors themselves present varied perspectives from academic departments and industrial organisations from around the world and from broad applications with contributions from researchers in the domains of process control sport aviation transportation and command and control The readership includes practitioners academics and researchers within human factors ergonomics and industrial psychology Graduate and Undergraduate students specialising within these areas during their final year

**The Psychologist**, 2000 **Contemporary Issues in Road User Behavior and Traffic Safety** Dwight A.

Hennessy, David L. Wiesenthal, 2005 This volume presents the work of researchers from around the world and from a variety

of disciplines who are actively searching for ways to make our roadways a safer and more pleasant place to be Although behavioural scientists have long been interested in learning about what drivers do the study of driving behaviour has only recently attracted the dedicated interest of psychologists and other researchers Roadways are now increasingly recognised as an excellent naturalistic setting to study a variety of behaviours that were previously constrained to laboratories Streets and roads are ubiquitous constituting an integral part of most people s everyday environment or life space As with other environmental features emotional meanings are attached to our subjective perceptions of roadways which ultimately influence immediate and long term thoughts feelings and actions This volume describes the growing body of research on driver behaviour and traffic safety including the nature measurement and treatment of roadway aggression types of traffic violations in diverse parts of the world the pervasive concern with the alcohol and driving attempts to modify problematic driver behaviours engineering and human factors concerns such as cell phone operation by drivers the use of vehicle black box recorders and the safety of airbags We also present some examples of theoretical models and their usefulness in stimulating research and providing an overall explanatory model for a diverse range of driving behaviours The chapters in this book explore many of these issues with driver behaviours being investigated by psychologists sociologists engineers and others

Centre, European Conference of Ministers of Transport, 2006-10-04 The great over representation of young drivers in crashes and road fatalities is a serious public health problem that exacts an unacceptable toll in human social and economic terms Young drivers account for about 27 per cent of driver fatalities across OECD countries although people in the same age group represent only about 10 per cent of the population Furthermore between 20 and 30 per cent of total traffic fatalities result from crashes involving a young driver Young male drivers crash fatality rates are as much as three times those of young female drivers and remain much higher even when adjusted to factor in their higher rates of exposure In some countries young males relative risk compared to that of other drivers is increasing The high levels of young driver risk result principally from factors of inexperience age and gender This risk is aggravated by the circumstances under which many young people drive young people especially men are over represented in crashes at high speed at night with similarly aged passengers involving alcohol and often when not wearing seatbelts There is no single solution The goal of reduced young driver crashes must be pursued through a combination of countermeasures involving the licensing process training and learning methods enforcement education and communication and technology
