The Lost Planets John Wenz,2019-10-08 A fascinating account of the pioneering astronomer who claimed erroneously to have discovered a planet outside the solar system There are innumerable planets revolving around innumerable stars across our galaxy Between 2009 and 2018 NASA's Kepler space telescope discovered thousands of them But exoplanets planets outside the solar system appeared in science fiction before they appeared in telescopes Astronomers in the early decades of the twentieth century spent entire careers searching for planets in other stellar systems In *The Lost Planets* John Wenz offers an account of the pioneering astronomer Peter van de Kamp who was one of the first to claim discovery of exoplanets Van de Kamp working at Swarthmore College's observatory announced in 1963 that he had identified a planet around Barnard's Star the second closest star system to the Sun He cited the deviations in Barnard's star's path wobbles that suggested a large object was lurching around the star Van de Kamp became something of a celebrity appearing on a television show with Mr Wizard Don Henry but subsequent research did not support his claims Wenz describes van de Kamp's stubborn refusal to accept that he was wrong discusses the evidence found by other researchers and explains recent advances in exoplanet detection including transit radial velocity direct imaging and microlensing Van de Kamp retired from Swarthmore in 1972 and died in 1995 at 93 In 2009 Swarthmore named its new observatory the Peter van de Kamp Observatory In the 1990s astronomers discovered and confirmed the first planet outside our solar system In 2018 an exoplanet was detected around Barnard's Star not however the one van de Kamp thought he had discovered in 1963

Dark Matter, Missing Planets and New Comets Tom Van Flandern,1999-01-08 Tom Van Flandern's book adds a new dimension to cosmology not only does it present a novel approach to timeless issues it stands up to the closest scientific scrutiny Even the most respected scientists today will readily admit that the Big Bang Theory is full of holes But it takes a new look like *Dark Matter Missing Planets and New Comets* to explain not only why the theory is wrong but what to substitute in its place If you are curious about such things as the nature of matter and the origin of the solar system but feel inadequately equipped to grasp what modern science has to say about such things read this book You will not get the all too common condescending attempt to water down the mysteries of modern science into a form intelligible to little non scientist you but rather a straightforward new theory logically derived in front of your eyes which challenges the roots of many of today's complex accepted paradigms yet whose essence is simple enough to be thoroughly communicated to the intelligent layman without losing it in the translation
