

2 The stellar initial mass function [32 points]

The two most popular stellar initial mass functions (IMFs) are the Kroupa and Salpeter IMFs. The Salpeter IMF has the form

$$\frac{dn}{dM} = kM^{-2.35},$$

with M the stellar mass in solar masses (M_{\odot}), n the number density of stars, and k a constant. Hence dn/dM is the number density of stars with masses between M and $M + dM$. The Kroupa IMF has the same powerlaw slope at $M > 0.5M_{\odot}$, but below $0.5M_{\odot}$ the power-law slope is -1.3, and thus

$$\frac{dn}{dM} = k_2M^{-1.30}.$$

This function is called a broken powerlaw. Assume both IMFs are only valid between 0.1 and 100 M_{\odot} , and no stars are formed outside this range.

a. [6 points] Given that the two powerlaws of the Kroupa IMF connect at $0.5M_{\odot}$, write k_2 as a function of k .

As discussed in class the most massive stars still alive dominate the light, and thus, it is extremely challenging to observe the light originating from lower mass stars. In order to

New Light on Galaxy Evolution Ralph Bender, Roger L. Davies, 1996-03-31 The study of the evolution of galaxies has made remarkable progress in recent years and is currently undergoing a transformation arising from the application of new observational and theoretical tools Twenty one invited reviews twenty six contributed papers and 137 poster papers cover the wide variety of recent developments present new insights and demonstrate the rapid increase in our knowledge about galaxy evolution and formation **Air Force Magazine** ,1998-07 The Molecular Biology of Cancer Stella Pelengaris, Michael Khan, 2013-03-13 The Molecular Biology of Cancer Stella Pelengaris each chapter builds on concepts learned in previous chapters with a list of key outstanding questions remaining in the field suggestions for further reading and questions for student review All chapters contain text boxes that provide additional and relevant information Key highlights are listed below An overview of the cancer cell and important new concepts Selected human cancers lung breast colorectal prostate renal skin cervix and hematological malignancies Key cellular processes in cancer biology including a traditionally important areas such as cell cycle control growth regulation oncogenes and tumour suppressors apoptosis as well as b more highly topical areas of apoptosis telomeres DNA damage and repair cell adhesion angiogenesis immunity epigenetics and the proteasome Clinical oncology In depth coverage of important concepts such as screening risk of cancer and prevention diagnoses managing cancer patients from start to palliative care and end of life pathways Chapters highlighting the direct links between cancer research and clinical applications New coverage on how cancer drugs are actually used in specific cancer patients and how therapies are developed and tested Systems Biology and cutting edge research areas covered such as RNA interference RNAi Each chapter includes key points chapter summaries text boxes and topical references for added comprehension and review Quotations have been used in each chapter to introduce basic concepts in an entertaining way Supported by a dedicated website at <http://www.blackwellpublishing.com/pelengaris> We should list the great reviews we got for first edition which are on the back of the 2nd edition A capturing comprehensive clearly written and absolutely accurate introduction into cancer biology This book deserves great praise for the readable presentation of this complex field the true synthesis of bench and bedside approaches is marvelously achieved Christian Schmidt Molecular Cell Chapters address the issues of cancer diagnosis treatment and patient care and set the book apart from general molecular biology references This book is applicable to both graduate and undergraduate students and in the context of a research laboratory this book would be an excellent resource as a reference guide for scientists at all levels V Emuss Institute of Cancer Research London Also from the first edition Pelengaris Khan and the contributing authors are to be applauded The Molecular Biology of Cancer is a comprehensive and readable presentation of the many faces of cancer from molecular mechanisms to clinical therapies and diagnostics This book will be welcomed by neophyte students established scientists in other fields and curious physicians Dean Felsher Stanford University **Large-Scale Structure of**

the Universe Kana Moriwaki, 2022-11-01 Line intensity mapping LIM is an observational technique that probes the large scale structure of the Universe by collecting light from a wide field of the sky This book demonstrates a novel analysis method for LIM using machine learning ML technologies The author develops a conditional generative adversarial network that separates designated emission signals from sources at different epochs It thus provides for the first time an efficient way to extract signals from LIM data with foreground noise The method is complementary to conventional statistical methods such as cross correlation analysis When applied to three dimensional LIM data with wavelength information high reproducibility is achieved under realistic conditions The book further investigates how the trained machine extracts the signals and discusses the limitation of the ML methods Lastly an application of the LIM data to a study of cosmic reionization is presented This book benefits students and researchers who are interested in using machine learning to multi dimensional data not only in astronomy but also in general applications

Building Galaxies: From The Primordial Universe To The Present, Procs Of The Sixth Rencontres De Moriond Veronique Cayatte, Bruno Guiderdoni, Francois Hammer, Trinh Xuan Thuan, J Tran Thanh Van, 2000-07-17 These proceedings provide a summary of the state of the art in the understanding of physical processes which control galaxy formation Many topics are discussed which present the latest observational results dust extinction the role of AGNs in the formation of massive galaxies etc How future instruments such as NGST ALMA FIRST KMT and SKAI can help to resolve these questions is also addressed The book will serve as a useful reference in the field for many years to come

Beyond Λ CDM Sownak Bose, 2018-08-02 This book employs computer simulations of artificial Universes to investigate the properties of two popular alternatives to the standard candidates for dark matter DM and dark energy DE It confronts the predictions of theoretical models with observations using a sophisticated semi analytic model of galaxy formation Understanding the nature of dark matter DM and dark energy DE are two of the most central problems in modern cosmology While their important role in the evolution of the Universe has been well established namely that DM serves as the building blocks of galaxies and that DE accelerates the expansion of the Universe their true nature remains elusive In the first half the authors consider sterile neutrino DM motivated by recent claims that these particles may have finally been detected Using sophisticated models of galaxy formation the authors find that future observations of the high redshift Universe and faint dwarf galaxies in the Local Group can place strong constraints on the sterile neutrino scenario In the second half the authors propose and test novel numerical algorithms for simulating Universes with a modified theory of gravity as an alternative explanation to accelerated expansion The authors techniques improve the efficiency of these simulations by more than a factor of 20 compared to previous methods inviting the readers into a new era for precision cosmological tests of gravity
