Finckenor, 2002 **The Space Environment and Its Effects on Space Systems** Vincent L. Pisacane, 2008 This textbook will help students and professionals understand the space environment and its impacts on spacecraft design engineering and performance While the primary emphasis of the book is the Earth s environment and its effects on spacecraft it also addresses the extraterrestrial environment and the effects of radiation on humans in space The book begins with an introduction to the history of spacecraft failures risk management reliability and quality assurance techniques and parts reliability It goes on to provide an overview of the structure of the Sun the structure origin and models of the geomagnetic field gravitational field of the Earth Earth s magnetosphere and radiation environment neutral environment including fundamentals of the kinetic theory of gases variation of pressure with altitude and hypoxia of humans electromagnetic propagation the effect of atomic oxygen on materials plasma surrounding the Earth transport and effects of photon and charged particle radiation on electronics and tissue spacecraft contamination techniques to mitigate debris impact and heat transfer and thermal control of spacecraft An appendix provides important astrodynamic constants and parameters of the celestial bodies in the solar system Problem sets and examples are included and a solution manual is available for instructors

**Physics of the Space Environment** Tamas I. Gombosi,2004-08-19 This book provides a comprehensive introduction to the physical phenomena that result from the interaction of the sun and the planets often termed space weather Physics of the Space Environment explores the basic processes in the Sun in the interplanetary medium in the near Earth space and down into the atmosphere The first part of the book summarizes fundamental elements of transport theory relevant for the atmosphere ionosphere and the magnetosphere This theory is then applied to physical phenomena in the space environment The fundamental physical processes are emphasized throughout and basic concepts and methods are derived from first principles This book is unique in its balanced treatment of space plasma and aeronomical phenomena Students and researchers with a basic mathematics and physics background will find this book invaluable in the study of phenomena in the space environment

**Combined Space Environment on Spacecraft Engineering Materials** National Aeronautics and Space Administration (NASA),2018-06-30 Spacecraft structures and surface materials exposed to the space environment for extended periods up to thirty years have increased potential for damage from long term exposure to the combined space environment including solar ultraviolet radiation electrons and protons and orbiting space debris The space environment in which the Space Station Freedom and other space platforms will orbit is truly a hostile environment For example the currently estimated integral fluence for electrons above 1 Mev at 2000 nautical miles is above  $2 \times 10^{10}$  electrons  $\text{cm}^{-2}$  day and the proton integral fluence is above  $1 \times 10^9$  protons  $\text{cm}^{-2}$  day At the 200 400 nautical miles which is more representative of the altitude which will provide the environment for the Space Station each of these fluences will be proportionately less however the data indicates that the radiation environment will obviously have an effect on structural materials exposed to the environment for long durations The effects of ultraviolet radiation particularly in the vacuum ultraviolet less than 200 nm wavelength is more difficult to characterize at this time Very little data is available in the literature which can be used for determining the life cycle of a material placed in space for extended durations of time In order to obtain critical data for planning and designing of spacecraft systems use of a small vacuum system at the Environmental Effects Facility at MSFC which can be used for these purposes was used A special effort was made to build up this capability during the course of this research effort and perform a variety of experiments on materials proposed for the Space Station A description of the apparatus and the procedure devised to process potential spacecraft materials is included Workman Gary L and Smith Guy A and Kosten Susan Unspecified Center NAS8 38609
