Breaking the Boundaries B. Sanyal, 2013-03-09 Exploring the complex arena of international planning for development has until now been uniquely the privilege of influential senior western planners This book calls into question many of their hallowed principles and much of the conventional wisdom still evident in the halls of academe At a time of increasing enrollment of foreign students in North American planning programs the emergence of a new voice has coincided with a growing skepticism worldwide about old notions of planning and development in poorer and ex colonial countries Now there is a need for brave innovations to reshape our understanding of the global crisis and the potential for progressive and democratic local solutions in both rich and poor nations alike This new voice is given expression by academics and professionals from Third World nations who received their planning education in the west and who now hold posts in major western planning schools *Breaking the Boundaries* presents their views and those of concerned colleagues about the need for a radically changed curriculum based on a comparative one world approach to planning education Their personal experiences as young expatriate scholars and later as teachers of both Third World and First World students in western planning schools are seen as crucial to this need for change Through candid reflections and perceptive critiques of their own field the spatial environmental social design and communications disciplines the contributors explore crucial issues in development planning from theoretical and professional practice perspectives

Urban Economic and Planning Models Rakesh Mohan,World Bank,1979 Urban models can be divided into explanatory or policy oriented classifications Explanatory models are usually systematic attempts at explaining urban form operational models on the other hand rely on either social physics or behavior principles Explanatory models focus on the tradeoffs between the cost of the site itself and the costs of travel the analytic problems caused by the unique quality of each location the effects of transport congestion on city form and the consequences of welfare emphasis on equity The social physics form of operational models tries to replicate statistical regularities observed in the activities of people within a city Economic models based on behavioral principles are the easiest to understand because their structure is drawn from behavioral relations derived from behavioral analysis The characteristics of operational and explanatory models overlap Two operational and two explanatory models are presented as exemplary techniques for modeling urban areas in developing countries Useful explanatory models are likely to require large sets of disaggregated data in order to provide the building blocks for the operational models
