Karl Fink, David Eugene Smith

The Geometry Of Character:

Geometry, Topology And Dynamics Of Character Varieties William Goldman, Caroline Series, Ser Peow Tan, 2012-06-18 This volume is based on lectures given at the highly successful three week Summer School on Geometry Topology and Dynamics of Character Varieties held at the National University of Singapore's Institute for Mathematical Sciences in July 2010 Aimed at graduate students in the early stages of research the edited and refereed articles comprise an excellent introduction to the subject of the program much of which is otherwise available only in specialized texts Topics include hyperbolic structures on surfaces and their degenerations applications of ping pong lemmas in various contexts introductions to Lorentzian and complex hyperbolic geometry and representation varieties of surface groups into $PSL(2, \mathbb{C})$ and other semi simple Lie groups This volume will serve as a useful portal to students and researchers in a vibrant and multi faceted area of mathematics

Geometry and Representation Theory of Real and p-adic groups Juan Tirao, David Vogan, Joe Wolf, 2012-12-06 The representation theory of Lie groups plays a central role in both classical and recent developments in many parts of mathematics and physics In August 1995 the Fifth Workshop on Representation Theory of Lie Groups and its Applications took place at the Universidad Nacional de Cordoba in Argentina Organized by Joseph Wolf Nolan Wallach Roberto Miatello Juan Tirao and Jorge Vargas the workshop offered expository courses on current research and individual lectures on more specialized topics The present volume reflects the dual character of the workshop Many of the articles will be accessible to graduate students and others entering the field Here is a rough outline of the mathematical content The editors beg the indulgence of the readers for any lapses in this preface in the high standards of historical and mathematical accuracy that were imposed on the authors of the articles Connections between flag varieties and representation theory for real reductive groups have been studied for almost fifty years from the work of Gelfand and Naimark on principal series representations to that of Beilinson and Bernstein on localization The article of Wolf provides a detailed introduction to the analytic side of these developments He describes the construction of standard tempered representations in terms of square integrable partially harmonic forms on certain real group orbits on a flag variety and outlines the ingredients in the Plancherel formula Finally he describes recent work on the complex geometry of real group orbits on partial flag varieties

Noncommutative Geometry and Physics 3 Giuseppe Dito, Motoko Kotani, Yoshiaki Maeda, 2013 Noncommutative differential geometry has many actual and potential applications to several domains in physics ranging from solid state to quantization of gravity The strategy is to formulate usual differential geometry in a somewhat unusual manner using in particular operator algebras and related concepts so as to be able to plug in noncommutativity in a natural way Algebraic tools such as K theory and cyclic cohomology and homology play an important role in this field

Finite Geometry and Character Theory Alexander Pott, 2014-01-15 *NASA Technical Paper*, 1983 *Morphology, Neurogeometry, Semiotics* Alessandro Sarti, 2024-06-03 Jean Petitot is a polyhedric thinker whose contributions has been

fundamental in a number of disciplines such as epistemology morphodynamics differential geometry structural semiotics neurogeometry phenomenology linguistics cognitive grammars the theory of catastrophes social sciences literary studies and aesthetics This book is a homage to his huge contribution about the main concepts of morphogenesis and meaning that constitute the center of gravity around which Petitotian reflection revolves and returns The scientific path of Jean Petitot develops between these two poles topology and meaning At stake it was to challenge the hiatus separating the exact sciences from the humanities that was the main point of the Petitot seminar of EHESS Epistemology of Models By designing the appropriate qualitative dynamics between the two poles form and meaning it is possible to understand the Saussurian sign in structural semiotics or the Greimasian semiotic square for deep narrative structures or even the canonical formula of the myth of Levi Strauss in structural anthropology These are just few results in applying the theory of catastrophes to the emergence of meaning The book is a collection of testimonies by distinguished authors who worked extensively with Jean Petitot in the different fields of Mathematics Neurogeometry Semiotics Aesthetics and Epistemology An extensive bibliography of Petitot's work is also presented

The Geometry of Multivariate Statistics Thomas D. Wickens, 2014-02-25 A traditional approach to developing multivariate statistical theory is algebraic Sets of observations are represented by matrices linear combinations are formed from these matrices by multiplying them by coefficient matrices and useful statistics are found by imposing various criteria of optimization on these combinations Matrix algebra is the vehicle for these calculations A second approach is computational Since many users find that they do not need to know the mathematical basis of the techniques as long as they have a way to transform data into results the computation can be done by a package of computer programs that somebody else has written An approach from this perspective emphasizes how the computer packages are used and is usually coupled with rules that allow one to extract the most important numbers from the output and interpret them Useful as both approaches are particularly when combined they can overlook an important aspect of multivariate analysis To apply it correctly one needs a way to conceptualize the multivariate relationships that exist among variables This book is designed to help the reader develop a way of thinking about multivariate statistics as well as to understand in a broader and more intuitive sense what the procedures do and how their results are interpreted Presenting important procedures of multivariate statistical theory geometrically the author hopes that this emphasis on the geometry will give the reader a coherent picture into which all the multivariate techniques fit
