traditionally told the story of Man and Nature Scholars have too frequently overlooked the ways in which their predominantly
male subjects have themselves been shaped by gender Seeing Nature through Gender here reintroduces gender as a
meaningful category of analysis for environmental history showing how women s actions desires and choices have shaped the
world and seeing men as gendered actors as well In thirteen essays that show how gendered ideas have shaped the ways in
which people have represented experienced and consumed their world Virginia Scharff and her coauthors explore
interactions between gender and environment in history Ranging from colonial borderlands to transnational boundaries from
mountaintop to marketplace they focus on historical representations of humans and nature on questions about consumption
on environmental politics and on the complex reciprocal relations among human bodies and changing landscapes They also
challenge the ecofeminist position by challenging the notion that men and women are essentially different creatures with
biologically different destinies Each article shows how a person or group of people in history have understood nature in
gendered terms and acted accordingly often with dire consequences for other people and organisms Here are considerations
of the ways we study sexuality among birds of William Byrd s masking sexual encounters in his account of an eighteenth
century expedition of how the ecology of fire in a changing built environment has reshaped firefighters own gendered
identities Some are playful as in a piece on the evolution of snow bunnies to shred bitties Others are dead serious as in a
chilling portrait of how endocrine disrupters are reinventing humans animals and water systems from the cellular level out
Aiding and adding significantly to the enterprise of environmental history Seeing Nature through Gender bridges gender
