Ultrastructure Of The Connective Tissue Matrix:

Ultrastructure of the Connective Tissue Matrix P. Motta, A. Ruggeri, 2012-12-06 In recent years the techniques of electron microscopy have developed so widely and rapidly that they now cover the fields of research once the unique domain of sister research techniques such as biochemistry physiology immunology X ray diffraction etc It is now possible to reach molecular and submolecular levels making this technique indispensable in every type of research Electron microscopy alone often provides enough information to solve given problems In the field of the connective tissue matrix knowledge of the molecular structure of collagen proteoglycans and elastin and their interaction has been to a large extent elucidated by electron microscopy The field over which electron microscopy ranges in the investigation of the connective tissue matrix is so wide that the aim of this volume is to collect the main ultrastructural acquisitions disseminated in various journals and monographs in one book The intent of this volume is to integrate different and new microscopic methods and review the results of such an integrative approach b present a comprehensive ultrastructural account of selected aspects of the field c point out gaps or controversial topics in our knowledge d outline pertinent future research and expansion of the subject

Electron Microscopy of Model Systems ,2010-09-24 The volume covers the preparation and analysis of model systems for biological electron microscopy The volume has chapters about prokaryotic as well as eukaryotic systems that are used as so called model organisms in modern cell biology These systems include the most popular systems such as budding and fission yeast the roundworm *C. elegans* the fly *Drosophila* zebrafish mouse and *Arabidopsis* but also organisms that are less frequently used in cell biology such as *Chlamydomonas* *Dictyostelium* *Trypanosoma* flatworms Axolotl and others In addition tissues and tissue culture systems are also covered These systems are used for very diverse areas of cell biology such as cell division abscission intracellular transport cytoskeletal organization tissue regeneration and others Moreover this issue presents the currently most important methods for the preparation of biological specimens This volume however is not a classic EM methods book The methods are not the main focus of this issue The main goal here is to cover the methods in the context of the specific requirements of specimen preparation for each model organism or systems This will be the first compendium covering the various aspects of sample preparation of very diverse biological systems Covers the preparation and analysis of model systems for biological electron microscopy Includes the most popular systems but also organisms that are less frequently used in cell biology Presents the currently most important methods for the preparation of biological specimens First compendium covering the various aspects of sample preparation of very diverse biological systems
