The British National Bibliography Arthur James Wells,1998 Dealing with Imbalanced and Weakly Labelled Data in Machine Learning using Fuzzy and Rough Set Methods Sarah Vluymans,2018-11-23 This book presents novel classification algorithms for four challenging prediction tasks namely learning from imbalanced semi supervised multi instance and multi label data The methods are based on fuzzy rough set theory a mathematical framework used to model uncertainty in data The book makes two main contributions helping readers gain a deeper understanding of the underlying mathematical theory and developing new intuitive and well performing classification approaches The authors bridge the gap between the theoretical proposals of the mathematical model and important challenges in machine learning The intended readership of this book includes anyone interested in learning more about fuzzy rough set theory and how to use it in practical machine learning contexts Although the core audience chiefly consists of mathematicians computer scientists and engineers the content will also be interesting and accessible to students and professionals from a range of other fields Robotics Oliver Brock,Jeffrey C. Trinkle,Jeff Trinkle,Fabio Ramos,2009 State of the art robotics research on such topics as manipulation motion planning micro robotics distributed systems autonomous navigation and mapping Robotics Science and Systems IV spans a wide spectrum of robotics bringing together researchers working on the foundations of robotics robotics applications and analysis of robotics systems This volume presents the proceedings of the fourth annual Robotics Science and Systems conference held in 2008 at the Swiss Federal Institute of Technology in Zurich The papers presented cover a range of topics including computer vision mapping terrain identification distributed systems localization manipulation collision avoidance multibody dynamics obstacle detection microrobotic systems pursuit evasion grasping and manipulation tracking spatial kinematics machine learning and sensor networks as well as such applications as autonomous driving and design of manipulators for use in functional MRI The conference and its proceedings reflect not only the tremendous growth of robotics as a discipline but also the desire in the robotics community for a flagship event at which the best of the research in the field can be presented
