Learning and Teaching Noel J. Entwistle, 2013-10-31 First Published in 1989 This book is in a sense a text book of educational psychology designed mainly for those with little previous knowledge of the subject But it is not a conventional text book To begin with it does not cover the whole area which normally defines educational psychology It concentrates instead on those aspects which are most directly applicable to understanding the processes related to learning intellectual skills and acquiring knowledge Also the book does not aim to provide a detailed coverage it is deliberately selective in the topics which are covered The main aim is to present an outline or perhaps an overview of current ideas in educational psychology in the hope of providing a more coherent picture of what otherwise tends to be a rather fragmentary set of topics drawn from mainstream psychology Read in conjunction with more conventional textbooks this overview should provide a good guide to the recent literature

**Renaissance Truth and the Latin Language Turn** Ann Moss, 2003 This study provides an entirely new look at an era of radical change in the history of West European thought the period between 1480 and 1540 mainly in France and Germany The book's main thesis is that the Latin language turn was not only concurrent with other aspects of change but was a fundamental instrument in reconfiguring horizons of thought reformulating paradigms of argument and rearticulating the relationship between fiction and truth
