Applications of Transport Theory in Optical Remote Sensing of Land Surfaces (PHD). Hiroki Yoshioka,1999 *Photon-Vegetation Interactions*

Ranga B. Myneni,Juhan Ross,2012-12-06 *Photon Vegetation Interactions* deals with the interaction of electromagnetic radiation with vegetation canopies The approach to the various aspects is mainly theoretical and consequently the subject is being treated as a special branch of mathematical physics A major emphasis is on the development of theoretical methods for determining the reflection function of vegetation canopies in optical remote sensing Furthermore the coupling of the radiative transfer theory with leaf photosynthesis to evaluate the productivity of vegetation canopies is treated as well as the theory of photon transport in phototropic and other biological media

Pattern Recognition and Image Processing in Physics, Robin Antony Vaughan,1991 The Scottish Universities Summer School in Physics has been held every year since 1960 The purpose of the school is to contribute to the dissemination of advanced knowledge and the formation of contacts among scientists from different countries The lecturers at the school are all international experts in their subject Their brief is to present an up to date survey of current research in their own field in the form of a coherent series of lectures at a level suitable for students who are normally in their second or third postgraduate year With more and more sophisticated computers and computer software proving itself invaluable with its advanced pattern recognition capabilities in such areas as defence and environmental and industrial control this edited volume discusses various systems that have emerged in recent years and their potential and actual applications Necessary computer architecture and software tools are explained Image processing and analysis are discussed paying particular attention to shape and motion analysis and image enhancement Neural networks play a vital role and are discussed in some detail Specific applications of this technology are concentrated

on in the final section of this work notably earth observations and geological study

Applications of Remote Sensing by Satellite, Radar, and Other Methods to Hydrology Albert Rango, World Meteorological Organization, 1994 *Selected Papers on Optical Remote Sensing Theory and Measurements* James A. Smith, 1997 Topics in this volume include reflection and transmission terminology by analogy with scattering radiometric considerations in remote sensing and light relations in plant canopies

Physics of the Environment and Climate Gérard Guyot, 1998-11-24 *Physics of the Environment and Climate* Gérard Guyot This introductory text reviews for the first time in a unified form information which is generally scattered between more specialized books in physics meteorology climatology ecophysiology agronomy and instrumental physics In *Physics of the Environment and Climate* Gérard Guyot brings together physical meteorological ecological and agronomical data with a view to clarifying our understanding of complex global and climatological phenomena relating to the environment In addition to the intrinsic scientific interest of this subject it also has important applications in planning and production in agriculture management of the rural environment and evaluation of the impact of human activity on our surroundings The first three chapters analyse energy and mass exchanges within and above the plant canopy and in the upper layers of the soil They describe also the interaction existing between plant activity photosynthesis transpiration etc and environmental factors The following two chapters introduce the basic knowledge necessary for an understanding of the mechanisms affecting climates at different scales from the synoptic to local microclimates The utilization of climatic data is then presented Beginning with statistical analyses the author leads on to practical applications such as the determination of climatic risks climatic and agro climatic distribution in zones and crop forecasting The final chapter reviews the equipment and measurement methods used for the determination of various climatic factors The broad nature of the book s approach its inclusion of large scale processes explanations of how to measure climatic factors and their use in solving practical problems in agro climatology will give the book immediate appeal

It provides the necessary information for land management planning from an agro meteorological point of view and is suitable for the undergraduate student and non specialist reader with only a basic understanding of physics and mathematics
