Thermo Hydro Mechanical Coupling In Frac:

Deflection of Fracturing Fracture Network Disturbed by Discontinuity and Multiple Fractures in Rock Yongliang Wang, 2025-10-27 This book presents frontier research in computational mechanics of mine rock mass and tackles the major engineering problems of unconventional oil and gas resources exploitation The hydrofracturing which forms a complex fracture network in deep reservoir rock is a key technology for oil and gas flow and extraction The propagation behaviors such as deflection penetration and intersection and fracture network morphology are crucial to the evaluation and control of oil and gas production This book mainly introduces from the following three aspects including deflection of fracturing fracture network disturbed by discontinuity in rock deflection of fracturing fracture network disturbed by multiple fractures propagation and deflection of fracturing fracture network in supercritical CO₂ fracturing The book focuses on the numerical research progresses of deflection of fracturing fracture network disturbed by discontinuity and multiple fractures in rock which covers the following main contents 1 dynamic intersection and deflection behaviors of hydraulic fractures meeting granules and natural fractures in tight reservoir rock based on statistical modelling and fractal characterization 2 deflection behaviors and fractal morphology of hydraulic fractures meeting beddings and granules with variable geometrical configurations and geo mechanical properties 3 dynamic propagation of tensile and shear fractures induced by impact load in rock based on dual bilinear cohesive zone model 4 center and edge type intersections of hydraulic fracture network under varying crossed natural fractures and fluid injection rate 5 wells connection and long hydraulic fracture induced by multi well hydrofracturing utilizing crossed perforation clusters 6 deflection of fracture networks and gas production in multi well hydrofracturing utilizing parallel and crossed perforation clusters 7 supercritical CO₂ driven intersections of multi well fracturing fracture network and induced micro seismic events in naturally fractured reservoir Given its scope the book offers a valuable reference guide for researchers postgraduates and undergraduates majoring in engineering mechanics mining engineering petroleum engineering geotechnical engineering and geological engineering

Mechanics of Hydraulic Fracturing Xi Zhang, Bisheng Wu, Diansen Yang, Andrew Bungler, 2022-12-20 *Mechanics of Hydraulic Fracturing* Comprehensive single volume reference work providing an overview of experimental results and predictive methods for hydraulic fracture growth in rocks *Mechanics of Hydraulic Fracturing Experiment Model and Monitoring* provides a summary of the research in mechanics of hydraulic fractures during the past two decades plus new research trends to look for in the future The book covers the contributions from theory modeling and experimentation including the application of models to reservoir stimulation mining preconditioning and the formation of geological structures The four expert editors emphasize the variety of diverse methods and tools in hydraulic fracturing and help the reader understand hydraulic fracture mechanics in complex geological situations To aid in reader comprehension practical examples of new approaches and methods are presented throughout the book Key topics covered in the book include Prediction of fracture shapes sizes and

distributions in sedimentary basins plus their importance in petroleum industry Real time monitoring methods such as micro seismicity and trace tracking How to uncover geometries of fractures like dikes and veins Fracture growth of individual foundations and its applications Researchers and professionals working in the field of fluid driven fracture growth will find immense value in this comprehensive reference on hydraulic fracturing mechanics

Thermo-Hydro-Mechanical (THM) coupled simulations of innovative enhanced geothermal systems for heat and electricity production as well as energy storage Muhammad Haris,2022-08-05 Enhanced geothermal systems EGSs evolved from the hot dry rock can provide a significant amount of energy while shifting towards negligible carbon emission In order to investigate some important issues related to EGS several scenarios have been analyzed using powerful numerical tools FLAC3Dplus and TOUGH2MP TMVOC While conducting multiple hydraulic fracturing it is observed that the newly created successive fracture s configuration highly depends on the previous one under the influence of stress shadow Therefore the assumption of using similar multiple fracture geometries and shapes for energy exploitation may lead to erroneous estimations A case study has been performed further using the engineering data of the GeneSys project in the North German Basin Numerous scenarios have been investigated and the optimized EGS project is proposed whose installed power capacity of one side of the injection well declines from 7 17 MW to 5 08 MW over 30 years Moreover the Levelized cost of electricity is calculated at 5 46 c kWh which is quite economical compared to the current electricity price Finally an innovative concept of regenerative EGS is proposed by storing surplus renewable energy in multiple hydraulic fractures that can reduce the reservoir temperature reduction rate The results of continuous injection production cycles depicted that a regenerative EGS could be achieved in reality

Optimization of hydraulic fracturing in tight gas reservoirs with alternative fluid Faisal Mehmood,2021-07-26 Due to the finite nature of petroleum resources

and depletion of conventional reservoirs the exploitation of unconventional resources has been a key to meeting world energy needs Natural gas a cleaner fossil fuel compared to oil and coal has an increasing role in the energy mix It is expected that the peak global natural gas production will remain between 3 7 6 1 trillion m³ per year between 2019 and 2060 Therefore addressing the technical challenges posed by reservoir exploitation technologies in an environmentally responsible manner is critical for efficient energy production and energy secure of the world

Numerical study of physico- chemical interactions for CO₂ sequestration and geothermal energy utilization in the Ordos Basin, China Hejuan Liu,2014-11-10

In this dissertation three simulators i e TOUGH2MP TOUGHREACT and FLAC3D were used to simulate the complex physical and chemical interactions induced by CO₂ sequestration The simulations were done instages ranging from the two phase water and CO₂ fluid flow H₂ through coupled hydro mechanical effects H₂M and geochemical responses i e CO₂ water rock interactions H₂C to the extension of CCS to CCUS by the application of combined geothermal production and CO₂ sequestration technologies The findings of this study are essential for a thorough understanding of the complex interactions in the multiphase multicomponent porous media controlled by different physical and chemical mechanisms Furthermore the simulation results will provide an invaluable reference for field operations in CCS projects especially for the full integration pilot scale CCS project launched in the Ordos Basin Subsequently a preliminary site selection scheme for the combined geothermal production and CO₂ sequestration was set up which considered various factorsinvolved in site selection ranging from safety economical environmental and technical issues This work provides an important framework for the combined geothermal production and CO₂ sequestration project However further numerical and field studies are still needed to improve on a series of criteria and related parameters necessary for a better understanding of the technology
