Theory Of Resonance Linear Accelerators:

RF Linear Accelerators Thomas P. Wangler, 2008-03-03 Borne out of twentieth century science and technology the field of RF radio frequency linear accelerators has made significant contributions to basic research energy medicine and national defense As we advance into the twenty first century the linac field has been undergoing rapid development as the demand for its many applications emphasizing high energy high intensity and high brightness output beams continues to grow RF Linear Accelerators is a textbook that is based on a US Particle Accelerator School graduate level course that fills the need for a single introductory source on linear accelerators The text provides the scientific principles and up to date technological aspects for both electron and ion linacs This second edition has been completely revised and expanded to include examples of modern RF linacs special linacs and special techniques as well as superconducting linacs In addition problem sets at the end of each chapter supplement the material covered The book serves as a must have reference for professionals interested in beam physics and accelerator technology

Particle Accelerator Physics II Helmut Wiedemann, 2012-12-06 This text is a continuation of the first volume of Particle Accelerator Physics on Basic Principles and Linear Beam Dynamics While the first volume was written as an introductory overview into beam dynamics it does not include more detailed discussion of nonlinear and higher order beam dynamics or the full theory of synchrotron radiation from relativistic electron beams Both issues are however of fundamental importance for the design of modern particle accelerators In this volume beam dynamics is formulated within the realm of Hamiltonian dynamics leading to the description of multiparticle beam dynamics with the Vlasov equation and including statistical processes with the Fokker Planck equation Higher order perturbations and aberrations are discussed in detail including Hamiltonian resonance theory and higher order beam dynamics The discussion of linear beam dynamics in Vol I is completed here with the derivation of the general equation of motion including kinetic terms and coupled motion To build on the theory of longitudinal motion in Vol I the interaction of a particle beam with the rf system including beam loading higher order phase focusing and the combination of acceleration and transverse focusing is discussed The emission of synchrotron radiation greatly affects the beam quality of electron or positron beams and we therefore derive the detailed theory of synchrotron radiation including spatial and spectral distribution as well as properties of polarization
