Tcell Receptor Use In Human Autoimmune:

T-cell Receptor Use in Human Autoimmune Diseases Mark M. Davis, Joel Buxbaum, 1995 Animal models of some autoimmune diseases have indicated restricted T cell receptor use and have suggested therapies based on those data. Patients with naturally occurring diseases have not shown a consistent picture of receptor utilisation. This volume discusses the spectrum of T cell receptor use in human disease, the relationship between the human and animal findings and the biological and therapeutic implications of the former. *The Molecular Pathology of Autoimmune Diseases* Argyrios N Theofilopoulos, Constantin A. Bona, 2002-12-06 Remarkable advances have been made in the pathogenesis of autoimmunity such as with bone marrow transplantation which is becoming a powerful strategy in treating certain life threatening diseases. *The Molecular Pathology of Autoimmune Diseases* is a concise and centralized resource for information on the topic with a special focus on the molecular and genetic basis of these disorders. Dozens of international experts devote themselves to illuminating the reader in this volume with discussions on the basic aspects of autoimmune processes to systemic and organ specific diseases. This volume is an invaluable reference to students and professionals in immunology and related fields.

Monoclonal Antibodies and Peptide Therapy in Autoimmune Diseases Jean-François Bach, 1993 Combining principles of modern immunology with applications to immunopathology, this reference documents developments in the immunotherapy of autoimmune diseases, emphasizing monoclonal antibody and peptide approaches, receptor itself to intervening at the level of the major histocompatibility complex (MHC) antigens. *Monoclonal Antibodies and Peptide Therapy in Autoimmune Diseases* provides an update on T cell basic science, discusses most monoclonal antibodies used in autoimmune disease experiments, describes the concept of peptide therapy in its various forms and presents fundamental pharmacological data that clarify the clinical usage of these new agents. *Therapy in Autoimmune Diseases* should be a useful resource for immunologists, rheumatologists, pharmacologists, pathologists, dermatologists, nephrologists and graduate and medical school students in these disciplines. *T Cell Receptors* John I. Bell, Michael J. Owen, M. J. Owen, Dr. Elizabeth Simpson, 1995 T cell receptor genes covers biochemical, functional and genetic aspects of this key family of immunological molecules. It should be essential reading for all those interested in the TCR and its function in health and disease. It deals with the TCR protein, its functional interactions with the signal transduction machinery of the T cell and with the structure and organization of the TCR genes. It is the only comprehensive volume on the TCR and is written by leaders in the field. Particularly useful is the tabulation and nomenclature of all the known TCR alpha and beta variable regions. Fundamental Immunology William E. Paul, 1993 The defining reference work in immunology today is now available in an entirely new text. This edition places greater emphasis on molecular mechanisms underlying cellular function and physiology and includes outstanding new chapters on neuroimmunology and immunotherapy, completely updated coverage of immune suppression and regulatory T cells and new

and expanded chapters on lymphocytes the immunology of aging autoimmunity and more A free CD ROM provides one click access to all of the content and illustrations from the text plus Internet links to PubMed and 50 other sites Nothing else competes with it JAMA review of the previous edition *T-cell Autoimmunity and Multiple Sclerosis* Marco Londei,1999

The Impact of Biotechnology on Autoimmunity A.G. Dalglish,A. Albertini,Rodolfo Paoletti,1994-02-28 The term autoimmunity has been used to categorize a number of different diseases of unknown etiology The term as applied to many of these diseases would probably be interpreted best as autoreactivity as the clinical phenotypes are often characterized by an inflammatory like accumulation of activated cells of the immune system at sites of obvious damage of normal cells and or tissue The reasons as to why an immune system should attack itself are far from clear although the association with specific infectious diseases in genetically susceptible people remains perhaps our best lead The input of the biotechnological revolution has enabled us to attempt to readdress many of the fundamental questions raised by clinical and serological associations with autoimmune disease The ability to dissect the immune response to these infectious agents which are associated with autoimmune features as well as the facility to identify new agents e g HIV in addition to the ability to clone and sequence immune response genes has enabled a much better understanding at least of the complexity of autoimmunity to be gleaned This volume contains the chapters that summarize the plenary presentations given at The Impact of Biotechnology on AUTOIMMUNITY meeting in Florence Italy in June 1993 They cover all aspects from pathogenesis to treatment The association with infectious diseases and autoimmunity is comprehensively covered by David Isenberg who reviews major issues such as the association of autoantibodies appearing after infectious disease and antibacterial antibodies associated with autoimmune disease

Cellular Immunity and the Immunotherapy of Cancer Michael T. Lotze,Olivera J. Finn,1990 Leading immunologists researchers and clinicians present their latest insights into cellular immunity and its applicability to the eradication of cancer Major questions critical to the further evaluation and exploitation of the cellular immune response are explored with topics ranging from T cell recognition of antigen and the T cell receptor T cell growth and expansion of specific cells and auto immunity and alloimmunity to melanoma in humans and mice natural killer cells and MHC unrestricted lysis tumour specific T cells and immunotherapy using animal models and clinical trials *The Journal of Immunology* ,2004

The Journal of Rheumatology ,1974

The Autoimmune Diseases Noel R. Rose,Ian R. Mackay,1998 The Autoimmune Diseases comprehensively describes the clinical expressions of all known autoimmune diseases as well as the experimental bases of autoimmunity and failure of tolerance The scientific chapters include mechanisms of natural tolerance the genetic basis of autoimmunity the significance of apoptosis the influence of cytokines environmental influences and experimental models The clinical chapters cover autoimmune endocrine deficiencies insulin dependent diabetes rheumatic disorders neurological diseases and diseases of the blood skin eye kidney and liver

New Concepts in Immunodeficiency Diseases Sudhir Gupta,Claude Griscelli,1993-06-08 Rapid progress has been made in the

understanding of the basic concepts of the immune response at biochemical and molecular levels This text reviews the development of innovative techniques for diagnosing disorders at a very early stage and for detecting their carrier states and discusses novel therapeutic approaches such as gene therapy and the use of biological response modifiers **Annals of the New York Academy of Sciences** Thomas Lincoln Casey, Gilbert Van Ingen, Charles Lane Poor, Edmund Otis Hovey, Ralph Winfred Tower, 2003 Records of meetings 1808 1916 in v 11 27 **Genetics of Asthma and Atopy** I. P. Hall, 1996 Allergic disease is caused by exposure of genetically predisposed individuals to sensitizing agents Presenting current reviews on the genetics of asthma and atopy this volume aims to increase the understanding of the mechanisms underlying this predisposition It includes general reviews on the role of genetic factors as well as articles specifically dealing with candidate genes or candidate loci likely to be important in the etiology of allergic disease Other chapters deal with the genetics of airway responsiveness in animal models and work examining the linkage between HLA genotypes and allergic disease Special attention is given to the role of genes on 11q including the high affinity IgE receptor in the development of allergic disease and the contribution of genes on 5q including TH2 cytokine genes and the beta2 adrenoceptor gene to the asthma phenotype A compilation of exciting up to date information this book is ideal for clinicians and basic scientists wishing to keep track of the latest findings in this challenging and fast moving field Basic Human Immunology Daniel P.
