Timely Research Perspectives In Carbohydrate Chemistry:

Timely Research Perspectives in Carbohydrate Chemistry Walther Schmid, Arnold E. Stütz, 2012-12-06 This book includes a collection of minireviews and research papers written by international leaders in the field of carbohydrate chemistry as well as promising young talents The contents of the contributions span from natural products over structure elucidation with special emphasis on spectroscopy syntheses and synthetic methods biological activities applications of carbohydrates and carbohydrate mimetics as well as their use as molecular scaffolds and carriers of biological information The reader will get a representative overview of state of the art research topics and approaches

Nanostructured Materials Heinrich Hofmann, Zakia Rahmann, Ulrich Schubert, 2012-12-06 The articles in this book summarize the work presented at the mid term workshop of the COST European Cooperation in the Fields of Scientific and Technical Research action on Nanostructured Materials which was held in October 2001 in Limerick Ireland The collection gives an excellent overview of the state of the art topical research areas in this field and the progress made by the coordinated research projects The articles cover synthesis physical properties and characterization of nanostructured materials such as magnetic and ferroelectric nanoparticles nanoparticles in biological systems metallic nanoparticles nanocomposites particle reinforced polymers semiconductor nanoparticles and thin films

The Organic Chemistry of Sugars Daniel E. Levy, Peter Fügedi, 2005-09-21 Intrigued as much by its complex nature as by its outsider status in traditional organic chemistry the editors of The Organic Chemistry of Sugars compile a groundbreaking resource in carbohydrate chemistry that illustrates the ease at which sugars can be manipulated in a variety of organic reactions Each chapter contains numerous examples demonst

Molecular Magnets Recent Highlights Wolfgang Linert, Michel Verdaguer, 2012-12-06 The book deals with recent scientific highlights on molecular magnetism in Europe Molecular magnetism is a new interdisciplinary discipline gathering together chemists and physicists theoreticians and experimentalists The book intends to provide the reader with documented answers to many current questions How can chemists use soft conditions to transform molecules in light and transparent magnets How does a molecular system can behave as a single molecule magnet How to combine several functions in the same molecular system How light can be used to switch molecular magnetic properties How can molecules be used for ultimate high density information storage or in quantum computing What kind of methods do physicists develop and use to explore these new properties of matter What kind of concepts and calculations can be provided for theoreticians to design new objects and to better understand the field and to enlarge its exciting developments

Current Developments in Solid State NMR Spectroscopy Norbert Müller, Perunthiruthy K. Madhu, 2013-04-17 Why to apply solid state NMR By now we should have learned that NMR is mainly used for the study of molecules in solution while x ray diffraction is the method of choice for solids Based on this fact the two recent NMR Nobelprizes went indeed into the liquid phase my own one eleven years ago and particularly the most recent one to Kurt Wuthrich His prize is beyond any doubts very well justified His

contribution towards the study of biomolecules in solution in their native or almost native environment is truly monumental. We all will profit from it indirectly when one of our future diseases will be cured with better drugs based on the insightful knowledge gained through liquid state NMR. Two fields of NMR are still left out of the Nobel Prize game: magnetic resonance imaging (MRI) and solid state NMR. The disrespect for MRI in Stockholm is particularly difficult to understand but this is not a subject to be discussed at the present place. Solid state NMR is the third of the three great fields of NMR: powerful already today and very promising for the near future.

Carbohydrate Chemistry Amélia Pilar Rauter, Yves Queneau, Angelina Sá Palma, 2025-12-22. The understanding of the structure recognition and function of carbohydrates and glycoconjugates remains crucial in diverse areas at the interface of biology, chemistry and biotechnology and is driving innovation in biomedical and material sciences. This new volume contains critical reviews covering the current state of the art and scientific advances in carbohydrate research and demonstrates cross-disciplinary areas within the field of glycosciences. Amongst the topics covered in Volume 47 are reviews focusing on the role of glycans in mechanisms of disease, highlighting the perspectives and challenges in diagnosis and their therapeutic potential as immune checkpoints in cancer, inflammation and autoimmunity, and also evidencing a role in the pathogenesis of neurodegenerative diseases such as Parkinson's disease. This volume also covers current knowledge on glycan biosynthesis at the molecular level to understand and exploit structural features in different biological settings: tumour-associated O-glycans in cancer, mycobacterial polysaccharides in infection and peptidoglycan in biofilm formation. Sustainable synthesis from biomass-derived carbohydrates is also reviewed in Volume 47 from a perspective of renewable resources, highlighting selected examples of the most relevant value-added compounds. Finally, the volume also gathers reviews on technology-driven research, highlighting emergent chemical and glycoengineering approaches for accessing the cancer glycoproteome and lectin-based tools for targeting disease biomarkers.
