The New Astronomy: Opening the Electromagnetic Window and Expanding our View of Planet Earth Wayne Orchiston, 2006-01-17 This is an unusual book combining as it does papers on astrobiology history of astronomy and sundials but after all Woody Sullivan is an unusual man In late 2003 I spent two fruitful and enjoyable months in the Astronomy Department at the University of Washington UW working on archival material accumulated over the decades by Woody for a book we will co author with Jessica Chapman on the early development of Australian astronomy The only serious intellectual distraction I faced during this period was planning for an IAU colloquium on transits of Venus scheduled for June 2004 in England where I was down to present the Cook paper I knew Woody was also interested in transits and indeed anything remotely connected with shadows see his paper on page 3 and in discussing the Preston meeting with him it transpired that his 60th birthday was timed to occur just one week later This was where the seed of Woodfest began to germinate Why not invite friends and colleagues to join Woody in Seattle and celebrate this proud event I put the idea to Woody and others at UW they liked it and Woodfest was born

Magmatic Rifting and Active Volcanism T.J. Wright,A. Ayele,D.J. Ferguson,T. Kidane,C. Vye-Brown,2016-09-06 A major rifting episode began in the Afar region of northern Ethiopia in September 2005 Over a ten day period c 2 5 km³ of magma were intruded along a 60 km long dyke separating the Arabian and Nubian plates Over the next five years a further 13 dyke intrusions caused continued extension eruptions and seismicity This activity led to a renewed international focus on the role of magmatism in rifting with major international collaborative projects working in Afar and Ethiopia to study the ongoing activity and to place it in a broader context This book brings together articles that explore the role of magmatism in rifting from the initiation of continental break up through to full seafloor spreading We also explore the hazards related to rifting and the associated volcanism This work has implications for our understanding of how continents break up and the associated distribution of resources in rift basins and continental margins

The Pedagogy of Physical Science David Heywood,Joan Parker,2009-12-16 In the science classroom there are some ideas that are as difficult for young students to grasp as they are for teachers to explain Forces electricity light and basic astronomy are all examples of conceptual domains that come into this category How should a teacher teach them The authors of this monograph reject the traditional separation of subject and pedagogic knowledge They believe that to develop effective teaching for meaningful learning in science we must identify how teachers themselves interpret difficult ideas in science and in particular what supports their own learning in coming to a professional understanding of how to teach science concepts to young children To do so they analyzed trainee and practising teachers responses to engaging with difficult ideas when learning science in higher education settings The text demonstrates how professional insight emerges as teachers identify the elements that supported their understanding during their own learning In this paradigm professional awareness derives from the practitioner interrogating their own learning and identifying implications for their teaching of science The book draws on a significant body of critically analysed empirical

evidence collated and documented over a five year period involving large numbers of trainee and practising teachers It concludes that it is essential to problematize subject knowledge both for learner and teacher The book s theoretical perspective draws on the field of cognitive psychology in learning In particular the role of metacognition and cognitive conflict in learning are examined and subsequently applied in a range of contexts The work offers a unique and refreshing approach in addressing the important professional dimension of supporting teacher understanding of pedagogy and critically examines assumptions in contemporary debates about constructivism in science education
