What is Blockchain?

Cryptocurrency

The requested transaction will then broadcasted to a P2P network consisting of computers, known as nodes.

A verified transaction can involve cryptocurrency, contracts, records or other information.

VALIDATION:
The network of nodes validates the transaction and the user's status using known algorithms.

Someone requests a transaction.

Once verified, the transaction is combined with other purchases to create a new block of data for the ledger.

The new block is then added to the existing blockchain, in a way that is permanent and unalterable.

The transaction is complete.

Has no intrinsic value in that is not another commodity such as gold.

Has no physical form and exists only in the network.

A central bank does not determine its supply and the network is entirely decentralised.
