Thorns Nectat:

The Essential Naturalist Michael H. Graham, Joan Parker, Paul K. Dayton, 2011-05-15 Like nearly every area of scholarly inquiry today the biological sciences are broken into increasingly narrow fields and subfields its practitioners divided into ecologists evolutionary biologists taxonomists paleontologists and much more But all these splintered pieces have their origins in the larger field of natural history and in this era where climate change and relentless population growth are irrevocably altering the world around us perhaps it s time to step back and take a new fresh look at the larger picture The Essential Naturalist offers exactly that a wide ranging eclectic collection of writings from more than eight centuries of observations of the natural world from Leeuwenhoek to E O Wilson from von Humboldt to Rachel Carson Featuring commentaries by practicing scientists that offer personal accounts of the importance of the long tradition of natural history writing to their current research the volume serves simultaneously as an overview of the field s long history and as an inspirational starting point for new explorations for trained scientists and amateur enthusiasts alike **Niche Construction**

F. John Odling-Smee, Kevin N. Lala, Marcus Feldman, 2013-02-15 The seemingly innocent observation that the activities of organisms bring about changes in environments is so obvious that it seems an unlikely focus for a new line of thinking about evolution Yet niche construction as this process of organism driven environmental modification is known has hidden complexities By transforming biotic and abiotic sources of natural selection in external environments niche construction generates feedback in evolution on a scale hitherto underestimated and in a manner that transforms the evolutionary dynamic It also plays a critical role in ecology supporting ecosystem engineering and influencing the flow of energy and nutrients through ecosystems Despite this niche construction has been given short shrift in theoretical biology in part because it cannot be fully understood within the framework of standard evolutionary theory Wedding evolution and ecology this book extends evolutionary theory by formally including niche construction and ecological inheritance as additional evolutionary processes The authors support their historic move with empirical data theoretical population genetics and conceptual models They also describe new research methods capable of testing the theory They demonstrate how their theory can resolve long standing problems in ecology particularly by advancing the sorely needed synthesis of ecology and evolution and how it offers an evolutionary basis for the human sciences Already hailed as a pioneering work by some of the world s most influential biologists this is a rare potentially field changing contribution to the biological sciences

Ant-plant interactions in Australia R.P. Buckley,2012-12-06 Early research on ant plant interactions in Australia was largely confined to the economically important problem of ants harvesting surface sown pasture seed e g Campbell 1966 The report by Berg 1975 of widespread myrmecochory in Australia and a burst of overseas research stimulated research on a range of ant plant interactions in Australia This book summarizes such research and presents recent and current work on seed harvesting myrmecochory ant epiphytes extrafloral nectaries ant plant homopteran systems and the influence of vegetation on ant faunas I hope that it will encourage further work in these and related areas and that the review and bibliography of ant plant interactions in the rest of the world will serve as a useful source for those entering the field The richness of Australia s flora and ant fauna render it a particularly interesting continent for the study of interactions between them As immediately apparent from the list of contents ant seed interactions are particularly significant in Australia This is not surprising for a relatively dry continent bearing a largely sclerophyllous plant cover Future research however especially in the tropical north is likely to reveal further types of interaction perhaps corresponding to those characteristic of the tropics elsewhere or perhaps distinctively Australian Some of the chapters have been shortened and modified considerably from the original manuscripts but the ideas and results presented are of course those of the individual authors
