**Tasmania. Geological Survey**

## **Volcano Sequence:**

Isotopic Ages and Stratigraphy of Cenozoic Rocks of the Marysvale Volcanic Field and Adjacent Areas, West-central Utah  
Peter D. Rowley, 1994     *Volcanism in Antarctica: 200 Million Years of Subduction, Rifting and Continental Break-up* J.L.

Smellie, K.S. Panter, A. Geyer, 2021-06-09 This memoir is the first to review all of Antarctica's volcanism between 200 million years ago and the Present. The region is still volcanically active. The volume is an amalgamation of in-depth syntheses which are presented within distinctly different tectonic settings. Each is described in terms of 1) the volcanology and eruptive palaeoenvironments, 2) petrology and origin of magma, and 3) active volcanism including tephrochronology. Important volcanic episodes include astonishingly voluminous mafic and felsic volcanic deposits associated with the Jurassic break-up of Gondwana, the construction and progressive demise of a major Jurassic to Present continental arc including back-arc alkaline basalts and volcanism in a young ensialic marginal basin, Miocene to Pleistocene mafic volcanism associated with post-subduction slab window formation, numerous Neogene alkaline volcanoes including the massive Erebus volcano and its persistent phonolitic lava lake that are widely distributed within and adjacent to one of the world's major zones of lithospheric extension, the West Antarctic Rift System, and very young ultrapotassic volcanism erupted subglacially and forming a world-wide type example, Gaussberg.     *Stratigraphic Notes, 1993* Avery, Ala. Drake, Louis Pavlides, 1994

**Volcanogenic Massive Sulphide Deposits of Latin America** Ross Lawrence, Sherlock, Amelia Logan, Geological Association of Canada, Mineral Deposits Division, 2000     **U.S. Geological Survey Bulletin**, 1983     **Volcanic Hazards in Central America** William Ingersoll Rose, 2006-01-01 This volume is a sampling of current scientific work about volcanoes in Central America with specific application to hazards. The papers reflect a variety of international and interdisciplinary collaborations and employ new methods. The book will be of interest to a broad cross-section of scientists, especially volcanologists. The volume also will interest students who aspire to work in the field of volcano hazards mitigation or who may want to work in one of Earth's most volcanically active areas.
