Hybrid Rice Technology S. S. Virmani, 1994 This symposium is a follow up to one held in China in 1986 Since then considerable progress has been made in research and development of hybrid rice This second international symposium was held under the umbrella of the International Rice Research Conference Eighty scientists and seed production experts from 18 countries IRRI and FAO attended Contributions covered breeding biotechnology seed production agronomy plant physiology plant pathology entomology and economics *Hybrid rice technology development: Ensuring China's food security* Jiming Li, Yeyun Xin, Longping Yuan, **Advances in Hybrid Rice Technology** Sant S. Hybrid Rice - The Journey Robin Andrews, 2017-03-17 In 1964 a Chinese rice breeder Yuan Longping discovered a rice plant that was the genetic key to the successful development of high yielding hybrid rice At that time China was a secretive communist state where self pollinating varietal rice was grown on collective farms using highly labor intensive practices Forty years later by 2004 hybrid rice based on Yuan's work was being grown commercially in the United States using mechanized farming practices This book describes the journey across those four decades and the chain of events and people which resulted in technical success in China by 1976 and in the United States by 2000 Extraordinary political and technological developments occurred during this time and the book describes these and the many serendipitous events and people of different backgrounds that were involved in the successful journey It is estimated that hybrid rice is now 2017 saving the US rice industry as much as 100 million each year *Hybrid Rice Seed Production Technology and Its Impact on Seed Industries and Rural Employment Opportunities in Asia* S.S. Virmani, 2002 The successful commercialization of hybrid rice in many parts of the world is linked to the development of hybrid seed production technology Although rice is a self pollinated crop a hybrid seed production mechanism has been developed using systems based on cytoplasmic and environmentally sensitive genetic male sterility Chinese seed growers obtain on average 2.5 mt ha seed yields range 1.5 to 7.4 mt ha Outside China in tropical countries mean seed yields are about 1.2 mt ha range 0.5 to 4.0 mt ha Hybrid seed production technology is economically viable in China and other countries with abundant and cheap labor because it requires about 50 mandays ha more labor than normal rice cultivation [Hybrid Rice in the Philippines](#), 2001 Recent developments and private sector initiatives on hybrid rice technology Germplasm conservation and characterization Varietal development Biotechnology Cultural management Pest management Policy research and economics Engineering and mechanization Hybrid rice seed production research Hybrid rice activities at PhilRice branch stations Hybrid rice technology

Hardy, 2003 *Studies on Seed Production and Storage Technology in Hybrid Rice* C. L. Maurya, 2014-07-22 The Asian cultivated rice *Oryza sativa* L is an economically important crop that is the staple food for more than one half of the world's population Rice contains a large amount of starch some protein fat minerals and vitamins It provides more calories per hectare than any other cereal crop Brown rice contains 7.5 per cent protein 1.9 per cent fat 1.2 per cent ash 77.4 per cent carbohydrates and 0.9 per cent fibre In addition it also contains 32 mg calcium 22 mg phosphorus 1.6 mg Iron 9.0 mg sodium 0.214 mg potassium 0.34 mg thiamine 0.05 mg riboflavin and 4.7 mg niacin per hundred gram of brown rice Hybrid rice research in china India and elsewhere during the past few years have established the superiority of hybrids over popular traditional varieties in respect of growth grain yield and tolerance to stresses Hybrid varieties yield 15 to 20 per cent higher than the best semi dwarf cultivars Hybrid rice seed production techniques have been standardized in china but in India the technology of hybrid seed production has yet not been perfect to suit its ecologies **Evaluating the adoption and impacts of agricultural technologies** Francisco Areal, Valerien Pede, 2023-12-18 **Accelerating Hybrid Rice Development**, *World Food Security and Crop Production Technologies for Tomorrow* Takeshi Horie, 1999 Perspective for world food demand and production Regional food security and major technological challenges Towards crops production Technologies sustaining the world food security Transformation of farming systems under the urbanization and commercialization developing countries in Asia Their diversification and sustainability Crop production technologies for breaking through yield potential Sustainable development of rainfed agriculture Environmental stresses and crop responses Research opportunities for technology development and delivery in crop soil management under diverse agroecosystems Technologies for sustainable development of direct seeding rice culture Physiology and growth substances Crop ecology Morphology Agronomy and cropping system Genetic resources **Proven Successes in Agricultural Development** David J. Spielman, Rajul Pandya-Lorch, 2010-01-01 The world has made enormous progress in the past 50 years toward eliminating hunger and malnutrition While in 1960 roughly 30 percent of the world's population suffered from hunger and malnutrition today less than 20 percent do some five billion people now have enough food to live healthy productive lives Agricultural development has contributed significantly to these gains by increasing food supplies reducing food prices and creating new income and employment opportunities for some of the world's poorest people This book examines where why and how past interventions in agricultural development have succeeded It carefully reviews the policies programs and investments in agricultural development that have reduced hunger and poverty across Africa Asia and Latin America over the past half century The 19 successes included here are described in in depth case studies that synthesize the evidence on the intervention's impact on agricultural productivity and food security evaluate the rigor with which the evidence was collected and assess the tradeoffs inherent in each success Together these chapters provide evidence of what works in agricultural

development *Molecular Methods for Hybrid Rice Production* Jorge E. Mayer, Jefferson. Richard Anthony, 2004 The main goal of this project was to develop molecular tools that will help solve the problems that prevent the use of hybrid seed technology in Australia The rationale behind our two line hybrid system is to create facultative male sterile lines based on activatable gametocides using a transgenic rice plant producing the activator enzyme in any part of the male sexual organ Plants would be fully fertile until treated with the compound Upon treatment the plant would become a female parent for the breeding process Another goal of this project in the long term is the fixation of the heterotic effects obtained from hybridisation by introducing apomixis parthenogenic seed development into rice We provide here additional tools to understand and manipulate flower development to this end *Hybrid Rice Seed Production Technology* S.S.
