Using Sustainable Neighborhood Resources for Successful Aging Amidst Global Crises Uddin, Emaj, 2026-02-06

As global crises like climate change, pandemics, and economic instability reshape societies, the need for resilient, supportive environments for aging populations becomes urgent. Sustainable neighborhood resources are critical when promoting successful aging. These resources support physical health and mobility while fostering social inclusion, mental well-being, and independence among older adults. Leveraging neighborhood sustainability offers a practical, community-based approach to aging that aligns with broader goals of environmental and public health. As the global population ages, rethinking the design and utilization of local resources may ensure older adults thrive during global crises. *Using Sustainable Neighborhood Resources for Successful Aging Amidst Global Crises* explores how sustainable neighborhood resources contribute to the health, independence, and well-being of aging populations. It examines how these strategies enhance resilience and support successful aging amidst global crises. This book covers topics such as medical care, public health, and welfare and risk management and is a useful resource for business owners, sociologists, policymakers, public health officials, academicians, researchers, and scientists. *YSEC Yearbook of Socio-Economic Constitutions 2023* Eduardo Gill-Pedro, Andreas

Moberg, 2024-05-06 Artificial intelligence (AI) has the potential to radically transform our society. It may lead to a massive increase in the capabilities of humankind and allow us to address some of our most intractable challenges. It may also entail profound disruption to structures and processes that have sustained our society over centuries. These developments present a unique challenge to the socio-economic constitutional arrangements which govern our world at national, regional, and international level. The deployment of increasingly powerful AI systems, able to function with increasing degree of autonomy, has led to concerns over loss of human control of important societal processes, over the disruption of existing economic, social, and legal relationships, and over the empowerment of some societal actors at the expense of others, together with the entrenchment of situations of domination or discrimination. It has also made increasingly clear how tremendous the potential benefits that these technologies may bring are to those who successfully develop and deploy them. There is therefore great pressure on governments, international institutions, public authorities, civil society organisations, industry bodies, and individual firms to introduce or adapt mechanisms and structures that will avoid the potentially negative outcomes of AI and achieve the positive ones. These mechanisms and structures, which have been given the umbrella term AI governance, cover a wide range of approaches, from individual firms introducing ethical principles which they volunteer to abide by, to the European Union legislating an AI Act which will prohibit certain types of AI applications and impose binding obligations on AI developers and deployers. The fast pace of innovation in the development of AI technologies is mirrored by the fast pace of development of the emerging field of AI governance, where traditional legislation by public bodies is complemented with more innovative approaches such as hybrid and adaptive governance, ethical alignment governance by design, and the creation
