Workload Characterization of Emerging Computer Applications Lizy Kurian John, Ann Marie Grizzaffi
Maynard, 2012-12-06 The formal study of program behavior has become an essential ingredient in guiding the design of new computer architectures. Accurate characterization of applications leads to efficient design of high performing architectures. Quantitative and analytical characterization of workloads is important to understand and exploit the interesting features of workloads. This book includes ten chapters on various aspects of workload characterization. On File caching characteristics of the industry standard web serving benchmark SPECweb99 are presented by Keller et al in Chapter 1 while value locality of SPECJVM98 benchmarks are characterized by Rychlik et al in Chapter 2. SPECJVM98 benchmarks are revisited again in Chapter 3 where Tao et al study the operating system activity in Java programs. In Chapter 4 KleinOowski et al describe how the SPEC2000 CPU benchmark suite may be adapted for computer architecture research and present the small representative input data sets they created to reduce simulation time without compromising on accuracy. Their research has been recognized by the Standard Performance Evaluation Corporation SPEC and is listed on the official SPEC website <http://www.spec.org/osg/cpu2000/research/umnl>. The main contribution of Chapter 5 is the proposal of a new measure called locality surface to characterize locality of reference in programs. Sorenson et al describe how a three dimensional surface can be used to represent both of programs. In Chapter 6 Thornock et al

Therefore the quantitative description of the processing requests i.e the workload characterization is of fundamental importance in all performance evaluation problems and is indispensable in the design of useful workload models. Now for the first time all problems related to workload characterization and modeling have been gathered together and analyzed in one volume. This book presents both the basic principles and the state of the art in workload characterization of computer systems and computer networks with special emphasis on experimental aspects. The methodologies and techniques currently used to characterize workloads for performance evaluation studies tuning design selection and capacity planning are all adequately described.
