Geological Mapping of Our World and Others Robert W. H. Butler,Taija Torvela,Laura M. Williams,2024-04-23 Map making is a fundamental tool for developing geological knowledge It involves data collection and interpretation and has its roots in the earliest discoveries in Earth science It is the starting point for stratigraphic and structural interpretations metamorphic facies geochronology and modelling studies and underpins civil engineering From the beginning geological mapping rapidly evolved into far more than being a simple spatial catalogue of observable rock types and landforms on the Earth s land surface deductive reasoning allows this knowledge to infer subsurface Earth structure However the same approaches have also been down scaled to deduce processes on the grain scale or up scaled to look out to extraterrestrial objects This Special Publication draws together these strands crossing geoscience disciplines and observation scales to celebrate geological mapping its historical importance and future directions and its use in applied geology together with developing knowledge of Earth and planetary evolution and processes [Planetary Cartography and GIS](#) Henrik Hargitai,2019-02-22 This book approaches geological geomorphological and topographical mapping from the point in the workflow at which science ready datasets are available Though there have been many individual projects on dynamic maps and online GISs in which coding and data processing are given precedence over cartographic principles cartography is more than just processing and displaying spatial data However there are currently no textbooks on this rapidly changing field and methods tend to be shared informally Addressing this gap in the literature the respective chapters outline many topics pertaining to cartography and mapping such as the role and definition of planetary cartography and vs Geographic Information Science theoretical background and practical methodologies in geological mapping science ready versus public ready products a goal procedure focused practical manual of the most commonly used software in planetary mapping which includes generic ArcGISand its extensions JMARS and specific tools HiView Cratertools etc extracting topographic information from images thematic mapping climate geophysics surface modeling change detection landing site selection shared maps dynamic maps on the web planetary GIS interfaces crowdsourcing crater counting techniques irregular bodies geological unit symbology mapping center activities and web services All chapters were prepared by authors who have actually produced geological maps or GISs for NASA the USGS DLR ESA or MIIGAIIK Taken together they offer an excellent resource for all planetary scientists whose research depends on mapping and for students of astrogeology [Volcanism and Tectonism Across the Inner Solar System](#) T. Platz,M. Massironi,P.K. Byrne,H. Hiesinger ,2015-01-05 Volcanism and tectonism are the dominant endogenic means by which planetary surfaces change This book aims to encompass the broad range in character of volcanism tectonism faulting and associated interactions observed on planetary bodies across the inner solar system a region that includes Mercury Venus Earth the Moon Mars and asteroids The diversity and breadth of landforms

produced by volcanic and tectonic processes is enormous and varies across the inner solar system bodies As a result the selection of prevailing landforms and their underlying formational processes that are described and highlighted in this volume are but a primer to the expansive field of planetary volcanism and tectonism This Special Publication features 22 research articles about volcanic and tectonic processes manifest across the inner solar system
