Spinal Cord Injuries:

The Care and Management of Spinal Cord Injuries G. M. Bedbrook, 2013-06-29 Spinal paralysis is probably the most devastating of all the illnesses that can befall man. Only a minority of paraplegia victims have made many significant contributions both in the initial treatment and in the later rehabilitation of spinal cord victims. He is a man who truly cares about people. Today the situation is quite different and 80% of spinal victims have a relatively normal life expectancy. The author of this book was one of the first to realize that if a paraplegic patient is from his staff. As a result his Spinal Unit in Perth Australia is one of the best treatment centers in the world. His individual can eventually recover sufficient function to live a productive life. This book of spinal injuries contains a lot of knowledge from both the scientific and practical viewpoints. It is truly staggering a fact that and independent life. This basic concept is quite obvious from the details contained in the book. **Spinal Cord Injuries** Alan G. Hardy, Alain B. Rossier, 1975 **Management of Spinal Cord Injuries** Lisa Harvey, 2007-12-27 Combining 25 years of clinical research and teaching experience Dr Lisa Harvey provides an innovative 5 step approach to the physiotherapy management of people with spinal cord injury. Based on the International Classification of Functioning this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor tasks, strength training, contracture management, pain management, respiratory management, cardiovascular fitness training. Dr Harvey develops readers problem solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as transfers and bed mobility of people, wheelchair mobility, hand function for people with tetraplegia, standing and walking with lower limb paralysis. This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians including those keen to explore the evidence base that supports different physiotherapy interventions. **Spinal Cord Injuries** Alex Ann Martin, Jayln E. Jones, 2012 Spinal cord injury (SCI) results from damage to the spinal cord due to trauma or disease and leads to partial or complete paralysis. Following SCI physiological and lifestyle changes can lead to poor health outcomes. However advances in injury stabilisation, medical treatment and rehabilitation have led to an increase in life expectancy. In this book the authors present current research on the causes, risk factors and
