The requested transaction will then broadcasted to a P2P network consisting of computers, known as nodes.

A verified transaction can involve cryptocurrency, contracts, records or other information.

VALIDATION: The network of nodes validates the transaction and the user's status using known algorithms.

Someone requests a transaction.

Once verified, the transaction is combined with other purchases to create a new block of data for the ledger.

The new block is then added to the existing blockchain, in a way that is permanent and unalterable.

The transaction is complete.

Has no physical form and exists only in the network.

A central bank does not determine its supply and the network is entirely decentralised.
