[Aircraft Management Activities. A Systematic Review](#) Muflaha Jafar,2024-10-10 Master s Thesis from the year 2024 in the subject Business economics Project Management London Metropolitan University language English abstract This systematic review seeks to answer the questions regarding the development process

efficiency issues and trends in the application of aircraft maintenance and management approaches. With ongoing changes in regulatory requirements, technological development, and cost control remaining critical issues for the aviation industry, it is therefore imperative to gain an appreciation of the evolution of maintenance practices. The review is based on the collection of secondary qualitative articles from various peer-reviewed papers and industry reports starting from the year 2000. The main themes explored in the review include historical overview, change from reactive to proactive maintenance techniques, preventive, predictive, and condition-based maintenance techniques and strategies. The work shows that there is a rather sharp shift from what the authors call the reactive maintenance paradigm, where the primary objective is to repair failed assets, to the so-called smart maintenance, which is based on the use of big data and analytics, AI, robotics, digital twins, and the like. Among new effective methodologies, we can single out predictive and condition-based maintenance, which taking advantage of real-time data analytics and sensor technologies, proved their effectiveness in terms of reducing the time spent on failures, costs, and increasing safety in comparison with previous methods.

Evaluation of Potential Use Cases for Blockchain in the Insurance Industry Ricardo Escoda, 2021-03-09. Master's Thesis from the year 2020 in the subject Economics Finance, grade 1.3, International School of Management Campus Munich, language English. Abstract: Blockchain is considered to be a breakthrough technology with many strengths and opportunities but also weaknesses and threats for all industries around the globe. It has the potential to revolutionize many sectors but it is not a universal remedy and does not replace every single traditional technology. Most businesses do feel insecure whether to invest time and money for Research and Development due to the lack of industry standards and regulations with respect to the technology. Before being able to guarantee suitability and successful implementation in any business, it is essential to study the differences between public, private, hybrid, and consortium Blockchain types. In areas of application not strongly relying on Blockchain's distributed systems, alternative solutions such as Big Data Analytics, Artificial Intelligence, and Machine Learning might be more valuable. Nonetheless, Blockchain promises the unique potential for insurance companies to efficiently serve global markets with areas of application mainly concentrating on parts of the VC where bureaucracy can be reduced by automation. For instance, the use of Smart Contracts, where lots of data are analyzed, saved, distributed, and processed. By implementing BC fields where the focus is on customer experience, such as Payments, Data Security, Transparency, and Developing New Business and Product Ideas, can be improved enormously. Use cases and new products supported by Blockchain might include P2P Micro Insurances, Ad hoc and Parametric Insurance Models, Automated Underwriting, Reduction of Fraud and Abuse, and Health Insurance Processes, Real Time Analytics in the Form of SCs, Instant Pay Outs, Automated Claims Management, and Improved Risk Modelling of Insurance Businesses might be achievable by connecting Blockchain and Big Data. Contrary to the expectations of the author, most industry experts are aware of the benefits and opportunities the technology can bring to their companies. Still, Blockchain is not anchored in their medium to long-term visions and strategies. Most of the interviewees

would rather act as active observers and early followers than taking the lead proactively Reasons for this behavior are the lack of market standards and regulations the absence of solid Blockchain networks and the shortage of use cases but also the lack of know how and data security concerns *The Cryptogram* ,1979 **The British National Bibliography** Arthur James Wells,2006 *Communications--fusing Command, Control, and Intelligence* ,1992 **The Software Encyclopedia** ,1988 **The Parliamentary Debates (Hansard)**.
