Cheetham, 2001-08 With all the recent advances in molecular and evolutionary biology one could almost wonder why we need the fossil record Molecular sequence data can resolve taxonomic relationships experiments with fruit flies demonstrate evolution and development in real time and field studies of Galapagos finches have provided the strongest evidence for natural selection ever measured in the wild What then can fossils teach us that living organisms cannot Evolutionary Patterns demonstrates the rich variety of clues to evolution that can be gleaned from the fossil record Chief among these are the major trends and anomalies in species development revealed only by deep time such as periodic mass extinctions and species that remain unchanged in form for millions of years Contributors explore modes of development the tempo of speciation and extinction and macroevolutionary patterns and trends The result is an important contribution to paleobiology and evolutionary biology and a spirited defense of the fossil record as a crucial tool for understanding evolution and development The contributors are Ann F Budd Efstathia Bura Leo W Buss Mike Foote Jrn Geister Stephen Jay Gould Eckart H kansson Jean Georges Harmelin Lee Ann C Hayek Jeremy B C Jackson Kenneth G Johnson Nancy Knowlton Scott Lidgard Frank K McKinney Daniel W McShea Ross H Nehm Beth Okamura John M Pandolfi Paul D Taylor and Erik Thomsen Paleozoic Stratigraphy and Resources of the Michigan Basin G. Hawaiian Plant Life Robert J. Gustafson, Derral R. Herbst, Philip W. Rundel, 2014-10-31 Hawaiian Plant Life has been written with both the layperson and professional interested in Hawaii's natural history and flora in mind In addition to significant text describing landforms and vegetation the evolution of Hawaiian flora and the conservation of native species the book includes almost 875 color photographs illustrating nearly two thirds of native Hawaiian plant species as well as a concise description of each genus and species shown The work can be used either as a stand alone reference or as a companion to the two volume Manual of the Flowering Plants of Hawaii Learning more about threatened and endangered plants is essential to conserving them and there is no more endangered flora in the world today than that of the Hawaiian Islands Striking species complexes such as the silverswords and the remarkable lobeliads represent unique stories of adaptive radiation that make the Hawaii a living laboratory for evolution Public appreciation for Hawaiian biodiversity requires outreach and education that will determine the future conservation of this rich heritage and Hawaiian Plant Life has been designed to help fill that need
