Britt,IBM Redbooks,2006-12-19 The TCP IP protocol suite has become the de facto standard for computer communications in today s networked world The ubiquitous implementation of a specific networking standard has led to an incredible dependence on the applications enabled by it Today we use the TCP IP protocols and the Internet not only for entertainment and information but to conduct our business by performing transactions buying and selling products and delivering services to customers We are continually extending the set of applications that leverage TCP IP thereby driving the need for further infrastructure support It is our hope that both the novice and the expert will find useful information in this publication   **TCP/IP Tutorial and Technical Overview** Martin W.
