Structural Pattern Analysis

JL Elias

Structural Pattern Analysis:

Structural Pattern Analysis Roger Mohr, Theodosios Pavlidis, Alberto Sanfeliu, 1990 This book contains a selection of 14 papers presented at the workshop organised by the International Association for Pattern Recognition IAPR Technical Committee on Syntactical and Structural Pattern Recognition at Pont Mousson 1988 These papers which have been expanded focus on both fundamental aspects and applications They show that structural methods are a good framework for integrating both symbolic and numerical knowledge for modeling recognition and also learning The applications described are on document analysis speech and image analysis

Structural Pattern Analysis Roger Mohr, T. H. Pavlidis, Alberto Sanfeliu, 1990-01-01

Syntactic and Structural Pattern Recognition Horst Bunke, Alberto Sanfeliu, 1990 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to unify the different chapters with respect to notation Naturally the self containedness of the individual chapters results in some redundancy However we believe that this handicap is compensated by the fact that each contribution can be read individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book

Structural Pattern Recognition using Graph Matching Shri Prakash Dwivedi, Ravi Shankar Singh, 2025-09-30 This book presents a comprehensive exploration of structural pattern recognition with a clear understanding of graph representation and manipulation It explains graph matching techniques unearthing the core principles of graph similarity measures subgraph isomorphism and advanced algorithms tailored to various pattern recognition tasks It bridges the gap between theory and application by providing case studies hands on examples and applications It is a reference book for academicians researchers and students working in the fields of structural pattern recognition computer vision artificial intelligence and data science Begins with the fundamentals of graph theory graph matching algorithms and structural pattern recognition concepts and explains the principles methodologies and practical implementations Presents relevant case studies and hands on examples across chapters to guide making informed decisions by graph matching Discusses various graph matching algorithms including exact and approximate methods geometric methods spectral techniques graph kernels and graph neural networks including practical examples to illustrate the strengths and limitations of each approach Showcases the versatility of graph matching in real world

applications such as image analysis biological molecule identification object recognition social network clustering and recommendation systems Describes deep learning models for graph matching including graph convolutional networks GCNs and graph neural networks GNNs

Patterns in Protein Sequence and Structure William R. Taylor, 2013-03-12 The contents of this volume derive loosely from an EMBO workshop held at EMBL Heidelberg towards the end of 1989 The topic of Patterns in Protein Sequence and Structure attracted a wide range of participants from biochemists to computer scientists and that diversity has to some extent remained in the contributions to this volume The problems of interpreting biological sequence data are to an increasing extent forcing molecular biologists to learn the language of computers including at times even the abstruse language of the computer scientists themselves While on their side the computer scientists have discovered a veritable honey pot of real data on which to test their algorithms This enforced meeting of two otherwise alien fields has resulted in some difficulties in communication and it was an aim of the EMBO workshop to help resolve these By the end most biologists at the meeting had at least heard the terms Dynamic Programming and Regular Expression while for their part the computer programmers began to realise that protein sequences might be more than simple Markov chains in a 20 letter alphabet Thanks to the modern facilities at EMBL the three day meeting was video taped and from this a transcript was taken and offered to the speakers as the basis for a contribution to this volume
