Spatial Orientation Theory Research And Application:

Spatial Orientation Herbert Pick, 2012-12-06 How do people know where in the world they are How do they find their way about These are the sort of questions about spatial orientation with which this book is concerned Staying spatially oriented is a pervasive aspect of all behavior Animals must find their way through their environment searching efficiently for food and returning to their home areas and many species have developed very sophisticated sensing apparatus for helping them do this Even little children know their way around quite complex environments They remember where they put things and are able to retrieve them with little trouble Adults in societies across the world have developed complex navigational systems for helping them find their way over long distances with few distinctive landmarks People across the world use their languages to communicate about spatial orientation in problems of simple direction giving and spatial descriptions as well as problems of long range navigation

Syntax and Semantics of Spatial P Anna Asbury, 2008 The category P belongs to a less studied area in theoretical linguistics which has only recently attracted considerable attention This volume brings together pioneering work on adpositions in spatial relations from different theoretical and cross linguistic perspectives The common theme in these contributions is the complex semantic and syntactic structure of PPs Analyses are presented in several different frameworks and approaches including generative syntax optimality theoretic semantics and syntax formal semantics mathematical modeling lexical syntax and pragmatics Among the languages featured in detail are English German Hebrew Igbo Italian Japanese and Persian This volume will be of interest to students and researchers of formal semantics syntax and language typology as well as scholars with a more general interest in spatial cognition

The Categorization of Spatial Entities in Language and Cognition Michel Aurnague, Maya Hickmann, Laure Vieu, 2007-01-01 Despite a growing interest for space in language most research has focused on spatial markers specifying the static or dynamic relationships among entities verbs prepositions postpositions case markings Little attention has been paid to the very properties of spatial entities their status in linguistic descriptions and their implications for spatial cognition and its development in children This topic is at the center of this book that opens a new field by sketching some major theoretical and methodological directions for future research on spatial entities Brought together linguistic descriptions of spatial systems formal accounts of linguistic data and experimental findings from psycholinguistic studies all couched within a wide cross linguistic perspective Such an interdisciplinary approach provides a rich overview of the many questions that remain unanswered in relation to spatial entities while also throwing a new light on previous research focusing on related topics concerning space and or the relation between language and cognition

Handbook of Behavioral and Cognitive Geography Daniel R. Montello, 2018-04-27 This comprehensive Handbook summarizes existing work and presents new concepts and empirical results from leading scholars in the multidisciplinary field of behavioral and cognitive geography the study of the human mind and activity in and concerning space place and environment It provides the broadest and most inclusive coverage of the field so far including

work relevant to human geography cartography and geographic information science

Historical Epistemology of Space Matthias Schemmel,2015-12-11 This monograph investigates the development of human spatial knowledge by analyzing its elementary structures and studying how it is further shaped by various societal conditions By taking a thoroughly historical perspective on knowledge and integrating results from various disciplines this work throws new light on long standing problems in epistemology such as the relation between experience and preformed structures of cognition What do the orientation of apes and the theory of relativity have to do with each other Readers will learn how different forms of spatial thinking are related in a long term history of knowledge Scientific concepts of space such as Newton s absolute space or Einstein s curved spacetime are shown to be rooted in pre scientific structures of knowledge while at the same time enabling the integration of an ever expanding corpus of experiential knowledge This work addresses all readers interested in questions of epistemology in particular philosophers and historians of science It integrates forms of spatial knowledge from disciplines including anthropology developmental psychology and cognitive sciences amongst others

Time and Space in Formal Logic Richard L. Epstein,2022-09-13 Time and Space in Formal Logic begins with an analysis of assumptions about how logic and language relate Then in the first section times are taken to be established by true propositions and those are related as before and after with temporal propositional connectives In the second section times are treated as things that can be picked out and counted leading to a predicate logic that allows for quantification over times In the third section locations in space are also treated as things that can be picked out and counted leading to a predicate logic that allows for quantification over both times and locations Many applications of the formal systems to formalizing ordinary language propositions and inferences clarify better the assumptions we make in reasoning taking account of time and space by making those precise in the formal systems Appendices on events branching times intentions and descriptive names add to the scope of the work

Perceptual Development in Early Infancy B. McKenzie,R. H. Day,2013-08-21 First published in 1987 This book is not intended to be either a comprehensive reference work or a systematic handbook on perception in infancy Nor is it another published report of a recently held conference It is a collection of state of the art essays on perception during the first year or so of infant development Rather than first choosing the topics and then finding experts to write about them the editors first chose the experts and invited them to write about those topics in which we know them to be interested and closely involved The outcome of this approach is a collection of chapters in which the authors at the same time critically review earlier contributions to the topic report their own work identify numerous unresolved problems and key issues and point out directions for future inquiry Naturally the emphasis placed on these facets varies markedly with both topic and author The result is a collection of commentaries that we believe to be comprehensive informative interesting and provocative

Theories and Methods of Spatio-temporal Reasoning in Geographic Space Andrew U. Frank,Irene Campari,Ubaldo Formentini,1992 This volume collects the papers presented

at the first international conference dedicated to spatial and temporal reasoning in geographic space entitled GIS from space to territory theories and methods of spatio temporal reasoning Within the National Center for Geographic Information and Analysis NCGIA one of the supporters of the conference the importance of spatial and temporal reasoning was recognized several years ago Initial research found that spatial reasoning in geographic or large scale space is different from spatial reasoning in small scale space as usually dealt with in robotics and expertsystems Temporal reasoning has attracted interest in the artificial intelligence community The volume also includes two invited papers Do people understand spatial concepts the case of first order primitives by R G Golledge and Temporal databases by R T Snodgrass PUBLISHER S WEBSITE

People and Space in the Middle Ages, 300-1300 Wendy Davies, Guy Halsall, Andrew J. Reynolds, 2006 This book compares community definition and change in the temperate zones of southern Britain and northern France with the starkly contrasting regions of the Spanish meseta and Iceland Local communities were fundamental to human societies in the pre industrial world crucial in supporting their members and regulating their relationships as well as in wider society While geographical and biological work on territoriality is very good existing archaeological literature is rarely time specific and lacks wider social context most of its premises are too simple for the interdependencies of the early medieval world Historical work by contrast has a weak sense of territory and no sense of scale like much archaeological work there is confusion about distinctions and relationships between kin groups neighbourhood groups collections of tenants and small polities The contributors to this book address what determined the size and shape of communities in the early historic past and the ways that communities delineated themselves in physical terms The roles of the environment labour patterns the church and the physical proximity of residences in determining community identity are also examined Additional themes include social exclusion the community as an elite body and the various stimuli for change in community structure Major issues surrounding relationships between the local and the governmental are investigated did larger polities exploit pre existing communities or did developments in governance call local communities into being **Working Paper** ,1991
