Teaching Conversation To Children With Autism Scripts And Script Fading:

Teaching Conversation to Children with Autism Lynn E. McClannahan, Patricia J. Krantz, 2005 Scripting is a teaching method designed to help children and adults with autism spectrum disorders ASDs who are nonverbal or who are verbal but don't initiate conversation to initiate conversation. The authors draw on years of experience using scripts in their own clinic and include many case studies that show how scripts have worked. The book defines scripts as an audiotape or written word phrase or sentence that enables young people with autism to use speech to start and continue conversations. At first a child is taught to play the recording of a word for an adult and then get a reaction from the adult e.g. if he plays the script juice the adult will give him a sip of juice or if he plays the script ball the adult will play ball with him. Later on the child is taught to play the script and then say the word himself and get the reward from the adult. As the child becomes better at talking scripts are lengthened to become phrases want juice or play ball and then sentences. And once the child can read scripts are written instead of recorded. As the child masters sets of scripts the adult begins to diminish fade the prompts. If the script was recorded words are gradually deleted from the recording e.g. if the script started out saying Where is mom they will re-record it so it just says Where is and then Where. At this point the child should fill in the blanks. [Teaching Conversation to Child with Autism](#) Lynn E. McClannahan, Patricia J. Krantz, 2005 For parents and professionals this book describes a proven method to help children with autism initiate and sustain conversation through the use of written and audiotaped scripts. **Effective Programs for Treating Autism Spectrum Disorder** Betty Fry Williams, Randy Lee Williams, 2010-09-15 Effective Programs for Treating Autism Spectrum Disorder is written for teachers, parents, and the many service providers who work with individuals with autism spectrum disorder ASD. Part one reviews the characteristics of ASD, summarizes major theories and research findings regarding causes of ASD, and discusses the most popular treatment claims, examining each approach's scientific base and value. Part two provides an informative overview of applied behavior analysis, focusing on the principles of learning and basic procedures based upon those principles. These two parts provide a foundation for understanding the strategies implemented by the outstanding treatment programs described in Part three. The eight models described in Part three represent comprehensive evidence-based programs for the treatment of persons with ASD from infancy through adulthood. Programs reviewed include the Lovaas Institute, Koegel Center, Strategic Teaching and Reinforcement Systems, STARS Project, DATA, New England Children's Center, May Institute, Princeton Child Development Institute, and Judge Rotenberg Center. Strategies explained include intensive early behavioral intervention, Pivotal Response Training, verbal behavior, script fading, social stories, visual activity schedules, functional analysis, the Picture Exchange Communication System, and the Family Teaching Model. **Evidence-Based Practices and Treatments for Children with Autism** Brian Reichow, Peter Doehring, Domenic V.
