## **The Second World War Part 1 Of 2:**

**British Army Communications in the Second World War** Simon Godfrey,2013-07-04 A history of British Army front line communications focussing on the effect that their performance had on the outcome of main World War II campaigns

**The Second World War Tank Crisis** Dick Taylor,2021-06-30 British Second World War tanks performed so badly that it is difficult to bring to mind any other British weapon of the period that provokes such a strong sense of failure Unfortunately many of the accusations appear to be true British tanks were in many ways a disgrace But why was Britain the country that invented them consistently unable to field tanks of the required quality or quantity throughout the conflict This perceived failure has taken on the status of a myth but like all myths it should not be accepted at face value it should be questioned and analyzed And that is what Dick Taylor does in this closely researched and absorbing study He looks at the flaws in British financial policy tank doctrine design production and development before and throughout the war years which often had fatal consequences for the crews who were sent to fight and to be murdered in mechanical abortions Their direct experience of the shortcomings of these machines is an important element of the story He also considers how British tanks compared to those of the opposition and contrasts tank production for the army with the production of aircraft for the RAF during the same period His clear sighted account goes on to explain how later in the conflict British tank design improved to the point where their tanks were in many ways superior to those of the Americans and Germans and how they then produced the Centurion which was one of the best main battle tanks of the post war era

**Military Aspects of Geology** E. P. F. Rose,J. Ehlen,U. L. Lawrence,2019-01-31 This book complements the Geological Society s Special Publication 362 Military Aspects of Hydrogeology Generated under the auspices of the Society s History of Geology and Engineering Groups it contains papers from authors in the UK USA Germany and Austria Substantial papers describe some innovative engineering activities influenced by geology undertaken by the armed forces of the opposing nations in World War I These activities were reactivated and developed in World War II Examples include trenching from World War I tunnelling and quarrying from both wars and the use of geologists to aid German coastal fortification and Allied aerial photographic interpretation in World War II The extensive introduction and other chapters reveal that military geology has a longer history These chapters relate to pre twentieth century coastal fortification in the UK and the USA conflict in the American Civil War long term going assessments for German forces tunnel repair after wartime route denial in Hong Kong and tunnel detection after recent insurgent improvisation in Iraq

*Air Force Journal of Logistics* ,1980 [Targeting the Third Reich](#) Robert S. Ehlers, Jr.,2015-04-15 When large formations of Allied four engine bombers finally flew over Europe it marked the beginning of the end for the Third Reich Their relentless hammering of Germany totaling more than 1 4 million missions took out oil refineries industries and transportation infrastructures vital to the Reich s war effort While other accounts have focused on operational details this is the first book to reveal the crucial role of air intelligence in these dramatic campaigns Robert Ehlers reexamines these

bombings through the lens of both air intelligence and operations a dual approach that shows how the former was so vital to the latter's success Air intelligence was essential to both targeting and damage assessment and by demonstrating its contributions to the Combined Bomber Offensive of 1943-1945 Ehlers provides a wealth of new insight into the war Ehlers describes the close ties that developed between the Royal Air Force's precision intelligence arm and the U.S. Army Air Force's precision bombardment forces telling how the RAF's photographic reconnaissance and signals intelligence steered both British and American bombers to the right targets at the right intervals with the right munitions He shows that the greatest strength of this partnership was its ability to orchestrate all aspects of damage assessment within an effective organizational structure so that by 1944 senior air commanders like the RAF's Arthur Bomber Harris and the AAF's Carl Tooley Spaatz could gauge the accuracy of bombing with a high degree of precision analyze its effects on the German war effort and determine its effectiveness in helping the Allies achieve strategic objectives Ehlers focuses on three key offensives in 1944 against French and Belgian rail supply lines delivering German troops and supplies to Normandy against German oil refineries and against railroads and waterways inside the Reich that had a disastrous effect on the Nazi war effort In the process he underscores the degree to which bombers constituted part of a highly effective combined arms force giving Allied armies crucial advantages on the battlefield Drawing on a huge collection of bomb damage assessment photographs and a wealth of other archival sources he shows that the success of these and other efforts can be traced directly to the success of air intelligence Providing a deeper and more accurate understanding of the bomber campaigns' role in the Allied victory Ehlers's study testifies to the strategic importance of these efforts in that war and provides a tool for understanding the importance of intelligence operations in future conflicts

**The Role of the Soviet Union in the Second World War** Boris Sokolov, 2013-04-24 This book investigates several controversial issues regarding the role of the Soviet Union and the performance of the Soviet government and Red Army to which the author provides some provocative answers The primary question explored by the author however regards the effectiveness of both the Red Army and of the Soviet military economy Dr Sokolov argues that the chief defect of the Soviet military economy was the disproportionate emphasis on the production of tanks and aircraft at the expense of transportation means and the means of command and control This leads the author to look at the role of Lend Lease during the war Through the delivery of radio sets trucks jeeps locomotives fuel explosives and so on the author concludes that Lend Lease was critical to the Red Army and that the Soviet Union would not have been able to wage a long war against Germany without the Lend Lease supplies a conclusion that defies decades of Soviet claims to the contrary Finally the author looks at the still very controversial and hot topic of Red Army losses in the war which was taboo for decades arguing that this is an effective measure of the Red Army's military performance He and other scholars have estimated that the Red Army's losses were on the scale of 27 million three times larger than the official estimates and approximately 10 times greater than the German losses on the Eastern Front He

argues that such horrendous casualties and such an unfavorable ratio for the Red Army were the result of the relatively low value placed on human life in both the Russian Empire and the Soviet Union and the much more destructive nature of the Soviet totalitarian regime as compared with the Third Reich which cowed the Soviet generals and officers into total subservience. Due to the elimination of all political opposition and the total control over people's lives, soldiers and civilians could not protest against the crude tactics that resulted in such a very high rate of losses. Dr. Boris Sokolov is a prolific author and a member of the Russian branch of PEN International which celebrates literature and promotes freedom of expression. In 2008, Dr. Sokolov was forced to resign as Professor of Social Anthropology from his post at the Russian State Social University in Moscow at the demand of President Medvedev's administration after publishing an article about the 2008 Russian-Georgian War. The author of 69 books as of 2012, his work has focused on the history of the Second World War and has also written biographies of such prominent military and political leaders as Bulgakov, Stalin, Molotov, Beria, Tukhachevsky, Rokossovsky, and Zhukov. In addition, he has written numerous articles on history, philology, political science, and economics. A prominent specialist in the problems of military losses, military economy, and strategy, he has given lectures in Russia, Estonia, Latvia, and Denmark, and his books and articles have been translated into numerous languages. He currently resides in Moscow and is working on a biography of Marshal Rodion Malinovsky. Stuart Britton is a freelance translator and editor residing in Cedar Rapids, Iowa. He has been responsible for making a growing number of Russian titles available to readers of the English language, consisting primarily of memoirs by Red Army veterans and recent historical research concerning the Eastern Front of the Second World War and Soviet air operations in the Korean War. Notable recent titles include Valeriy Zamulin's award-winning *Demolishing the Myth: The Tank Battle at Prokhorovka, Kursk, July 1943: An Operational Narrative* (Helion, 2011), Boris Gorbachevsky's *Through the Maelstrom: A Red Army Soldier's War on the Eastern Front, 1942-45* (University Press of Kansas, 2008), and Yuri Sutiagin's and Igor Seidov's *MiG Menace Over Korea: The Story of Soviet Fighter Ace Nikolai Sutiagin* (Pen Sword Aviation, 2009). Future books will include Svetlana Gerasimova's analysis of the prolonged and savage fighting against Army Group Center in 1942-43 to liberate the city of Rzhev, and more of Igor Seidov's studies of the Soviet side of the air war in Korea, 1951-1953.

*Quest for Decisive Victory* Robert Michael Citino, 2002. Since the earliest days of warfare, military operations have followed a predictable formula: after a decisive battle, an army must pursue the enemy and destroy its organization in order to achieve a victorious campaign. But by the mid-19th century, the emergence of massive armies and advanced weaponry, and the concomitant decline in the effectiveness of cavalry, had diminished the practicality of pursuit, producing campaigns that bogged down, short of decisive victory. Great battles had become curiously indecisive; decisive campaigns virtually impossible.
