*Proceedings of the ... D'Hollander,G.R. Joubert,Frans Peters,Ulrich Trottenberg,1998-07-22 This volume gives an overview of the state of the art with respect to the development of all types of parallel computers and their application to a wide range of problem areas The international conference on parallel computing ParCo97 Parallel Computing 97 was held in Bonn Germany from 19 to 22 September 1997 The first conference in this biannual series was held in 1983 in Berlin Further conferences were held in Leiden The Netherlands London UK Grenoble France and Gent Belgium From the outset the aim with the ParCo Parallel Computing conferences was to promote the application of parallel computers to solve real life problems In the case of ParCo97 a new milestone was reached in that more than half of the papers and posters presented were concerned with application aspects This fact reflects the coming of age of parallel computing Some 200 papers were submitted to the Program Committee by authors from all over the world The final programme consisted of four invited papers 71 contributed scientific industrial papers and 45 posters In addition a panel discussion on Parallel Computing and the Evolution of Cyberspace was held During and after the conference all final contributions were refereed Only those papers and posters accepted during this final screening process are included in this volume The practical emphasis of the conference was accentuated by an industrial exhibition where companies demonstrated the newest developments in parallel processing equipment and software Speakers from participating companies presented papers in industrial sessions in which new developments in parallel computing were reported      **Trust in Cyberspace** Committee on Information Systems Trustworthiness,Commission on Physical Sciences, Mathematics, and Applications,Computer Science and Telecommunications Board,Division on Engineering and Physical Sciences,National Research Council,1999-01-22 Whether or not you use a computer you probably use a telephone electric power and a bank Although you may not be aware of their presence networked computer systems are increasingly becoming an integral part of your daily life Yet if such systems perform poorly or don t work at all then they can put life liberty and property at tremendous risk Is the trust that we as individuals and as a society are placing in networked computer systems justified And if it isn t what can we do to make such systems more trustworthy This book provides an assessment of the current state of the art procedures for building trustworthy networked information systems It proposes directions for research in computer and network security software technology and system architecture In addition the book assesses current technical and market trends in order to better inform public policy as to where progress is likely and where incentives could help Trust in Cyberspace offers insights into

The strengths and vulnerabilities of the telephone network and Internet the two likely building blocks of any networked information system The interplay between various dimensions of trustworthiness environmental disruption operator error buggy software and hostile attack The implications for trustworthiness of anticipated developments in hardware and software technology including the consequences of mobile code The shifts in security technology and research resulting from replacing centralized mainframes with networks of computers The heightened concern for integrity and availability where once only secrecy mattered The way in which federal research funding levels and practices have affected the evolution and current state of the science and technology base in this area You will want to read this book if your life is touched in any way by computers or telecommunications But then whose life isn't
