## Weakly Semialgebraic Spaces:

*Weakly Semialgebraic Spaces* Manfred Knebusch, 2006-11-14 The book is the second part of an intended three volume treatise on semialgebraic topology over an arbitrary real closed field  $R$ . In the first volume LNM 1173 the category  $LSA\ R$  or regular paracompact locally semialgebraic spaces over  $R$  was studied. The category  $WSA\ R$  of weakly semialgebraic spaces over  $R$  the focus of this new volume contains  $LSA\ R$  as a full subcategory. The book provides ample evidence that  $WSA\ R$  is the right cadre to understand homotopy and homology of semialgebraic sets while  $LSA\ R$  seems to be more natural and beautiful from a geometric angle. The semialgebraic sets appear in  $LSA\ R$  and  $WSA\ R$  as the full subcategory  $SA\ R$  of affine semialgebraic spaces. The theory is new although it borrows from algebraic topology. A highlight is the proof that every generalized topological cohomology theory has a counterpart in  $WSA\ R$  with in some sense the same or even better properties as the topological theory. Thus we may speak of ordinary singular homology groups, orthogonal unitary or symplectic  $K$  groups and various sorts of cobordism groups of a semialgebraic set over  $R$ . If  $R$  is not archimedean then it seems difficult to develop a satisfactory theory of these groups within the category of semialgebraic sets over  $R$  with weakly semialgebraic spaces. This becomes easy. It remains for us to interpret the elements of these groups in geometric terms. This is done here for ordinary cohomology.

Real Algebraic Geometry Michel Coste, Louis Mahe, Marie-Francoise Roy, 1992-11-10 Ten years after the first Rennes international meeting on real algebraic geometry the second one looked at the developments in the subject during the intervening decade. See the 6 survey papers listed below. Further contributions from the participants on recent research covered real algebra and geometry, topology of real algebraic varieties and 16th Hilbert problem, classical algebraic geometry techniques in real algebraic geometry, algorithms in real algebraic geometry, semialgebraic geometry, real analytic geometry.

**Mathematical Logic and Applications** Juichi Shinoda,1989 These proceedings include the papers presented at the logic meeting held at the Research Institute for Mathematical Sciences Kyoto University in the summer of 1987 The meeting mainly covered the current research in various areas of mathematical logic and its applications in Japan Several lectures were also presented by logicians from other countries who visited Japan in the summer of 1987 **Transformation Groups and Algebraic K-Theory** Wolfgang Lück,1989-11-28 The book focuses on the relation between transformation groups and algebraic K theory The general pattern is to assign to a geometric problem an invariant in an algebraic K group which determines the problem The algebraic K theory of modules over a category is studied extensively and applied to the fundamental category of G space Basic details of the theory of transformation groups sometimes hard to find in the literature are collected here Chapter I for the benefit of graduate students Chapters II and III contain advanced new material of interest to researchers working in transformation groups algebraic K theory or related fields **Varieties of Lattices** Peter Jipsen, Henry Rose,1992-12-14 The study of lattice varieties is a field that has experienced rapid growth in the last 30 years but many of the interesting and deep results discovered in that period have so far only appeared in research papers The aim of this monograph is to present the main results about modular and nonmodular varieties equational bases and the amalgamation property in a uniform way The first chapter covers preliminaries that make the material accessible to anyone who has had an introductory course in universal algebra Each subsequent chapter begins with a short historical introduction which sites the original references and then presents the results with complete proofs in nearly all cases Numerous diagrams illustrate the beauty of lattice theory and aid in the visualization of many proofs An extensive index and bibliography also make the monograph a useful reference work **Functional-analytic Methods for Partial Differential Equations**

 self contained approach to the problem of determining the conditions under which a compact bordered Klein surface  $S$  and a  
 finite group  $G$  exist such that  $G$  acts as a group of automorphisms in  $S$  The cases dealt with here take  $G$  cyclic abelian
