

A network diagram consisting of several glowing blue spheres (nodes) connected by glowing blue lines. The nodes are arranged in a roughly triangular pattern, with one node at the bottom right and others branching out towards the top left. The background is a dark, textured surface that looks like a wooden floor with vertical planks. The overall lighting is dim, with the primary light source being the glowing nodes and lines.

Image Objects Jacob Gaboury, 2021-08-03 How computer graphics transformed the computer from a calculating machine into an interactive medium as seen through the histories of five technical objects Most of us think of computer graphics as a relatively recent invention enabling the spectacular visual effects and lifelike simulations we see in current films television shows and digital games In fact computer graphics have been around as long as the modern computer itself and played a fundamental role in the development of our contemporary culture of computing In Image Objects Jacob Gaboury offers a prehistory of computer graphics through an examination of five technical objects an algorithm an interface an object standard a programming paradigm and a hardware platform arguing that computer graphics transformed the computer from

a calculating machine into an interactive medium Gaboury explores early efforts to produce an algorithmic solution for the calculation of object visibility considers the history of the computer screen and the random access memory that first made interactive images possible examines the standardization of graphical objects through the Utah teapot the most famous graphical model in the history of the field reviews the graphical origins of the object oriented programming paradigm and finally considers the development of the graphics processing unit as the catalyst that enabled an explosion in graphical computing at the end of the twentieth century The development of computer graphics Gaboury argues signals a change not only in the way we make images but also in the way we mediate our world through the computer and how we have come to reimagine that world as computational

Computers in Art, Design and Animation John Lansdown,Rae Earnshaw,2012-12-06 The collection of papers that makes up this book arises largely from the joint activities of two specialist groups of the British Computer Society namely the Displays Group and the Computer Arts Society Both these groups are now more than 20 years old and during the whole of this time have held regular separate meetings In recent years however the two groups have held a joint annual meeting at which presentations of mutual interest have been given and it is mainly from the last two of these that the present papers have been drawn They fall naturally into four classes visualisation art design and animation although as in all such cases the boundaries between the classes are fuzzy and overlap inevitably occurs Visualisation The graphic potential of computers has been recognised almost since computing was first used but it is only comparatively recently that their possibilities as devices for the visualisation of complex and largely abstract phenomena has begun to be more fully appreciated Some workers stress the need to be able to model photographic reality in order to assist in this task They look to better algorithms and more resolution to achieve this end Others Alan Mackay for instance suggest that it is not just a matter of providing more and more pixels It is a matter of providing congenial clues which employ to the greatest extent what we already know
