The rise of non-fungible tokens (NFTs) in fashion and luxury Laura Schneider,2022-11-21 Master's Thesis from the year 2022 in the subject Business economics Miscellaneous grade 7-8 Bocconi University Department of Management and Technology course M.Sc. International Management language English abstract The concept of the metaverse and non

fungible tokens has become ubiquitous and fashion and luxury companies are faced with the need to define a thorough strategy to tackle its business impact. Despite some brands acting at the forefront of NFT adoption, the utility of the infant technology remains unclear. By conducting a 2x2 factorial design experiment, this research creates insights into guidelines for NFT strategies for fashion and luxury companies. First, the high importance of connecting NFT offers with experiences is confirmed. Second, a coherence of values between NFT technology and the luxury industry was illustrated. Finally, the experiment suggested a high difference in perceived utility of real world asset NFTs and digital asset NFTs for mainstream brands, while the difference could not be proven in the case of luxury companies. In conclusion, the NFT strategy matrix was developed, which introduces four dimensions of brand loyalty: brand collectors, fad enthusiasts, and fad curious, differentiated by their brand loyalty and desired NFT utility. This framework aims to provide a tool for fashion and luxury companies to cater their holistic NFT offering to different customer groups. In general, it is advisable to move from digital asset NFTs toward real world asset NFTs in order to engage consumers with rare experiences in a virtual or physical setting and deploy the technology as an experiential marketing tool.

Blockchain Technology Compliance with the European Union (EU) General Data Protection Regulation (GDPR) Oliver Zeidler, 2020-09-04. Essay from the year 2020 in the subject Computer Sciences Internet of Things IOT grade 1.0 Oxford University Faculty of Law language English abstract. In this essay, I will argue that the GDPR is slowing down technology progress in the EU with respect to the Blockchain technology. The blockchain is of particular interest to me as I detected the potential legal issues and impact of blockchain technology within my professional work. I identified several legal ramifications in different fields of law that I believe will raise major problems in the near future. Moreover, it is not currently certain how the United Kingdom will treat the international law internally after Brexit as Article 3 GDPR is limiting the spatial application area to the European Union and processes taking place in this terrain. I will outline these problems here.

Bitcoin's potential of becoming a world currency Finn Schwarz, 2019-11-22. Seminar paper from the year 2019 in the subject Economics Finance grade 1.7 Northern Business School course International Financial Relations language English abstract. In this thesis, the crypto currency Bitcoin should be examined for its suitability as world currency or part of it. In order to determine the potential of Bitcoin, the terms currency and cryptocurrency must be explained and defined first. Included in the definition of cryptocurrencies is the meaning of the Bitcoin system and the functionality will be roughly explained. In this thesis, the detailed technical aspects of the design of the Bitcoin system are greatly simplified and partially neglected. After that follows a summary of advantages and disadvantages of cryptocurrencies in general that can be found in the literature. This is primarily to gain insight into how the current perception of Bitcoin is in the public and to identify arguments that are likely to have a high impact on others' opinions. After the consideration of the cryptocurrency Bitcoin follows a historical discussion with the concept of the world currency. It will be investigated which approaches of a world currency already existed in the recent past and which are currently available.

This will lead to the identification of the driving forces and challenges that have an impact on the fiscal world order. Thereon the findings about the Bitcoin system will be laid against the discussion about a world currency and potentials will be derived. After a conclusive summary and a critical conclusion further research opportunities in the investigated fields are finally opened. [The Impact of Blockchain Technology on Capital Markets. Neoliberalism and the Rise of Bitcoin Michelle Trauth, 2018-09-20 Research Paper, postgraduate from the year 2018 in the subject Sociology, Individual Groups, Society, grade 75, Distinction, Bournemouth University, language English, abstract. By the end of 2017 almost everybody has heard of Bitcoin. Therefore the topic of this essay is highly relevant and aims to give an insight on Bitcoin and Blockchain technology as well as analyze the rise of Bitcoin from a socio-economic viewpoint. By applying the personal enterprise concept based on the neo-liberal definition from Dardot and Laval (2013) this essay will look at the correlation between the increase of neoliberalism and the rise of Bitcoin. By highlighting the sociological and financial circumstance that Bitcoin has emerged from, the rise of Bitcoin can be explained. This essay will show how decentralization, the financial crisis of 2008, globalization, digitization, and the neo-liberal mindset are the main factors that paved the way for Bitcoin and contributed to its development. The essay will also look at the societal changes that occurred due to digitization to demonstrate why Bitcoin and Altcoins are increasingly popular in today's network societies.
